Water treatment by moringa oleifera seed

Moringa oleifera seeds contain natural coagulants which can be used in water treatment . This paper will study the efficiency of seeds extract in treatment of drinking water. Seeds extract will be applied to water samples from EL-rayah AL-Tawfiky (in Benha city) . The following parameters will be measured for raw and treated water : Turbidity ,PH ,TDS ,Conductivity ,Total alkalinity ,Total hardness ,Calcium ,Magnisium ,Total coliform ,Total plate count.

Summary

This paper will study the efficiency of seeds extract in treatment of drinking water
