BES-III distributed computing status

Thursday, 3 July 2014 10:40 (20 minutes)

The BES-III experiment at the Institute of High Energy Physics (IHEP), Beijing, uses the high-luminosity BEPC-II e+e- collider to study physics in the tau-charm energy region around 3.7 GeV. BEPC-II has produced the world's largest samples of J/psi and psi' events to date. An order of magnitude increase in the data sample size over the 2011-2013 data-taking period demanded a move from a very centralized to a distributed computing environment.
JINR participates in the experiment since 2005. Main JINR team computing activities are data management and grid monitoring. Great progress have been reached in data-store infrastructure. First production version of the monitoring system for BES-III was developed and has been actively used.
Here we present general information, latest results and plans of JINR - BES-III collaboration in the area of distributed computing.

Primary authors: Dr UZHINSKIY, Alexander (Joint Institute for Nuclear Research); Dr ZHEMCHUGOV, Alexey (Joint Institute for Nuclear Research); Mr PELEVANYUK, Igor (Joint Institute for Nuclear Research); Mr BELOV, Sergey (Joint Institute for Nuclear Research)

Co-authors: Dr ZHANG, Gang (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China); Dr LIN, Tao (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China); Dr YAN, Tian (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China); Prof. LI, Weidong (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China); Dr ZHAO, Xianghu (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China); Dr YAN, Xiaofei (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China); Dr ZHANG, Xiaomei (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China); Dr DENG, Ziyan (Institute of High Energy Physics , Chinese Academy of Sciences, Beijing, China)

Presenter: Dr UZHINSKIY, Alexander (Joint Institute for Nuclear Research)

Session Classification: Plenary

Track Classification: Section 1 - Technologies, architectures, models, methods and experiences of building distributed computing systems. Consolidation and integration of distributed resources
