Contribution ID: 110

Type: Plenary reports

## dCache: Inter-disciplinary storage system

*Tuesday, 6 July 2021 11:15 (45 minutes)*

The dCache project provides open-source software deployed internationally to satisfy ever more demanding storage requirements. Its multifaceted approach provides an integrated way of supporting different use-cases with the same storage, from high throughput data ingest, data sharing over wide area networks, efficient access from HPC clusters and long term data persistence on a tertiary storage. Though it was originally developed for the HEP experiments, today it is used by various scientific communities, including astrophysics, biomed, life science, which have their specific requirements. In this presentation we will show some of the new requirements as well as demonstrate how dCache developers are addressing them.

### Summary

**Primary author:** MKRTCHYAN, Tigran (DESY)

**Presenter:** MKRTCHYAN, Tigran (DESY)

**Session Classification:** Plenary reports

**Track Classification:** 6. Data Management, Organisation and Access
