The technology and Tools for the Building of Information Exchange Package Based on Semantic Domain Model

Monday, 5 July 2021 16:00 (15 minutes)

This paper presents the technology developed by the authors to improve the semantic interoperability of heterogeneous systems exchanging information through an object-oriented bus. We demonstrate the solution that allows semantically map the models of interacting information systems with a unified data model (domain otology) when developing an information exchange package.
