VII International Conference "Models in Quantum Field Theory" (MQFT-2022)

Contribution ID: 79

Type: Session Talk

Evaluation of massive helicity amplitudes using 4-component spinors.

Tuesday, 11 October 2022 17:10 (25 minutes)

Helicity amplitudes in with massive fermions can be written in tensor form using 4-component spinors (bi-spinors). The approach is demonstrated using the examples of hard Bremsstrahlung processes for future e^+e^- colliders.
