

Documentation:

- We now have a hub for calibration info. Docs are available here: <https://www.mkdocs.org/>
- Write markdown, then push your changes to `git@git.jinr.ru:Baikal/bars-docs.git`
- We must document the existing calibrations & assemble the first tags.
- Begin documenting our methods. Let's just copy paste from our papers at first, smooth things out later.

Tag issues:

- What should we include in the tag?
- How do we produce channel mask with DQM?
- What DQM parameters should be in the tag? Should we include the commit/software tag used for data production?
