JINR Open Access Repository

Within the framework of the cooperation agreement between JINR and DESY, together with the participants of the JOIN2 project, an institutional repository JINR Document Server (JDS) was created at JINR for storing the information resources of the institute and providing effective access to them. JOIN² (https://join2.de) is a shared repository infrastructure that brings together eight research institutes for the development of a full-fledged scholarly publication database and repository based on the Invenio v1.1 open-source framework for large-scale digital repositories.During JDS migration to JOIN² platform, the enhancements required to handle the Cyrillic for the correct authority records display have been implemented. This enhancement is applied to other national languages also. Web forms for input the publications have been improved taking into account the types of JINR publications. The authority records of the Topical plan for JINR research and international cooperation are being downloaded to link publications to funding sources. A support of single database of JINR users entry was implemented in JDS. The pre-production version based on JOIN2 project software can be accessed publications.jinr.ru. JDS started beta-testing in March 2021.

Primary authors: FILOZOVA, Irina (JINR); SEMENOV, Roman (JINR); ZAIKINA, Tatiana (JINR, LIT); SHESTAKOVA, Galina

Presenter: ZAIKINA, Tatiana (JINR, LIT)

Session Classification: Information Technologies
