

# Beam pipe in SPD

Artem Ivanov  
JINR, Dubna

Physics Weekly Meeting  
24.05.2022

# The purpose of the study

- 1) To modify geometry of the beam pipe in SpdRoot based on latest design of its
- 2) To find out the number of secondary interactions in the beam tube that could potentially contaminate the event with tertiary produced particles
- 3) In view of the new demountable design of the pipe, evaluate how much it is possible to thicken its walls in order to make the design more reliable and cheaper

# Beam pipe in SPD

*D-120.000.000 Beam pipe SPD ver. 03.03.2021*  
*Aluminium alloy 1201 GOST 4784-2019*

# Beam pipe in SpdRoot

# Study of beam pipe

$pp, \sqrt{s} = 27 \text{ GeV}, \text{Pythia 8}$

Two samples,  $N_{\text{events}} = 10000$

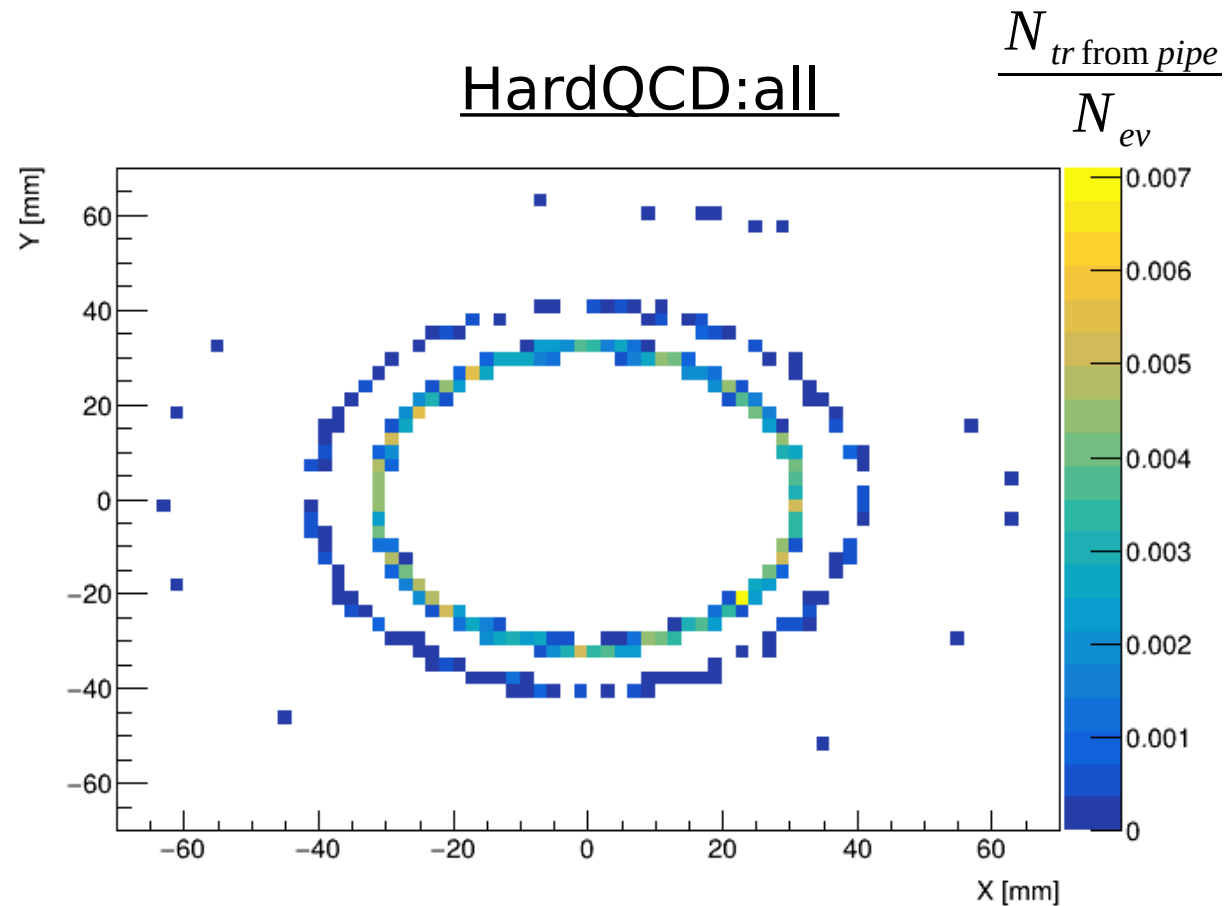

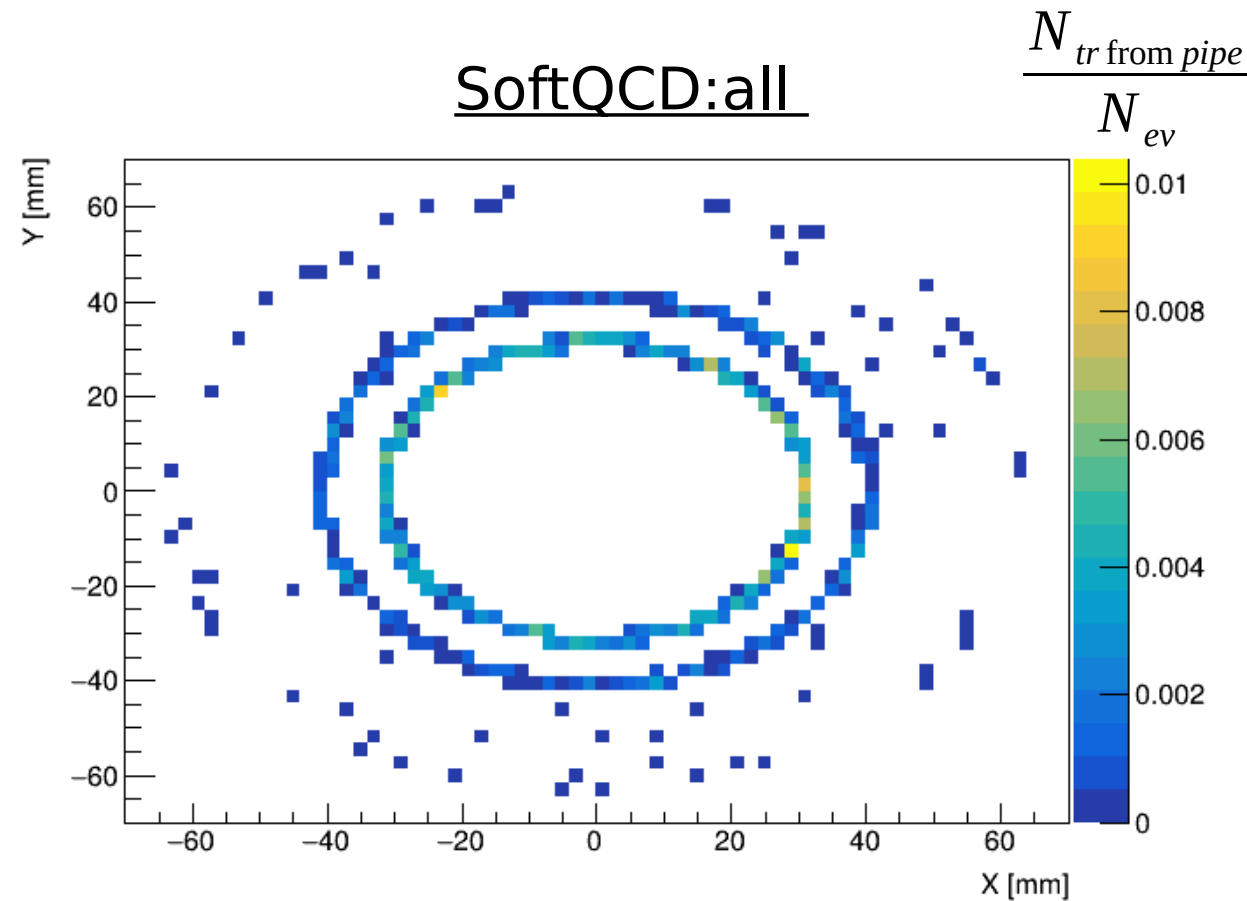

- 1) SoftQCD:all
- 2) HardQCD:all

# Beam pipe: XY-distribution

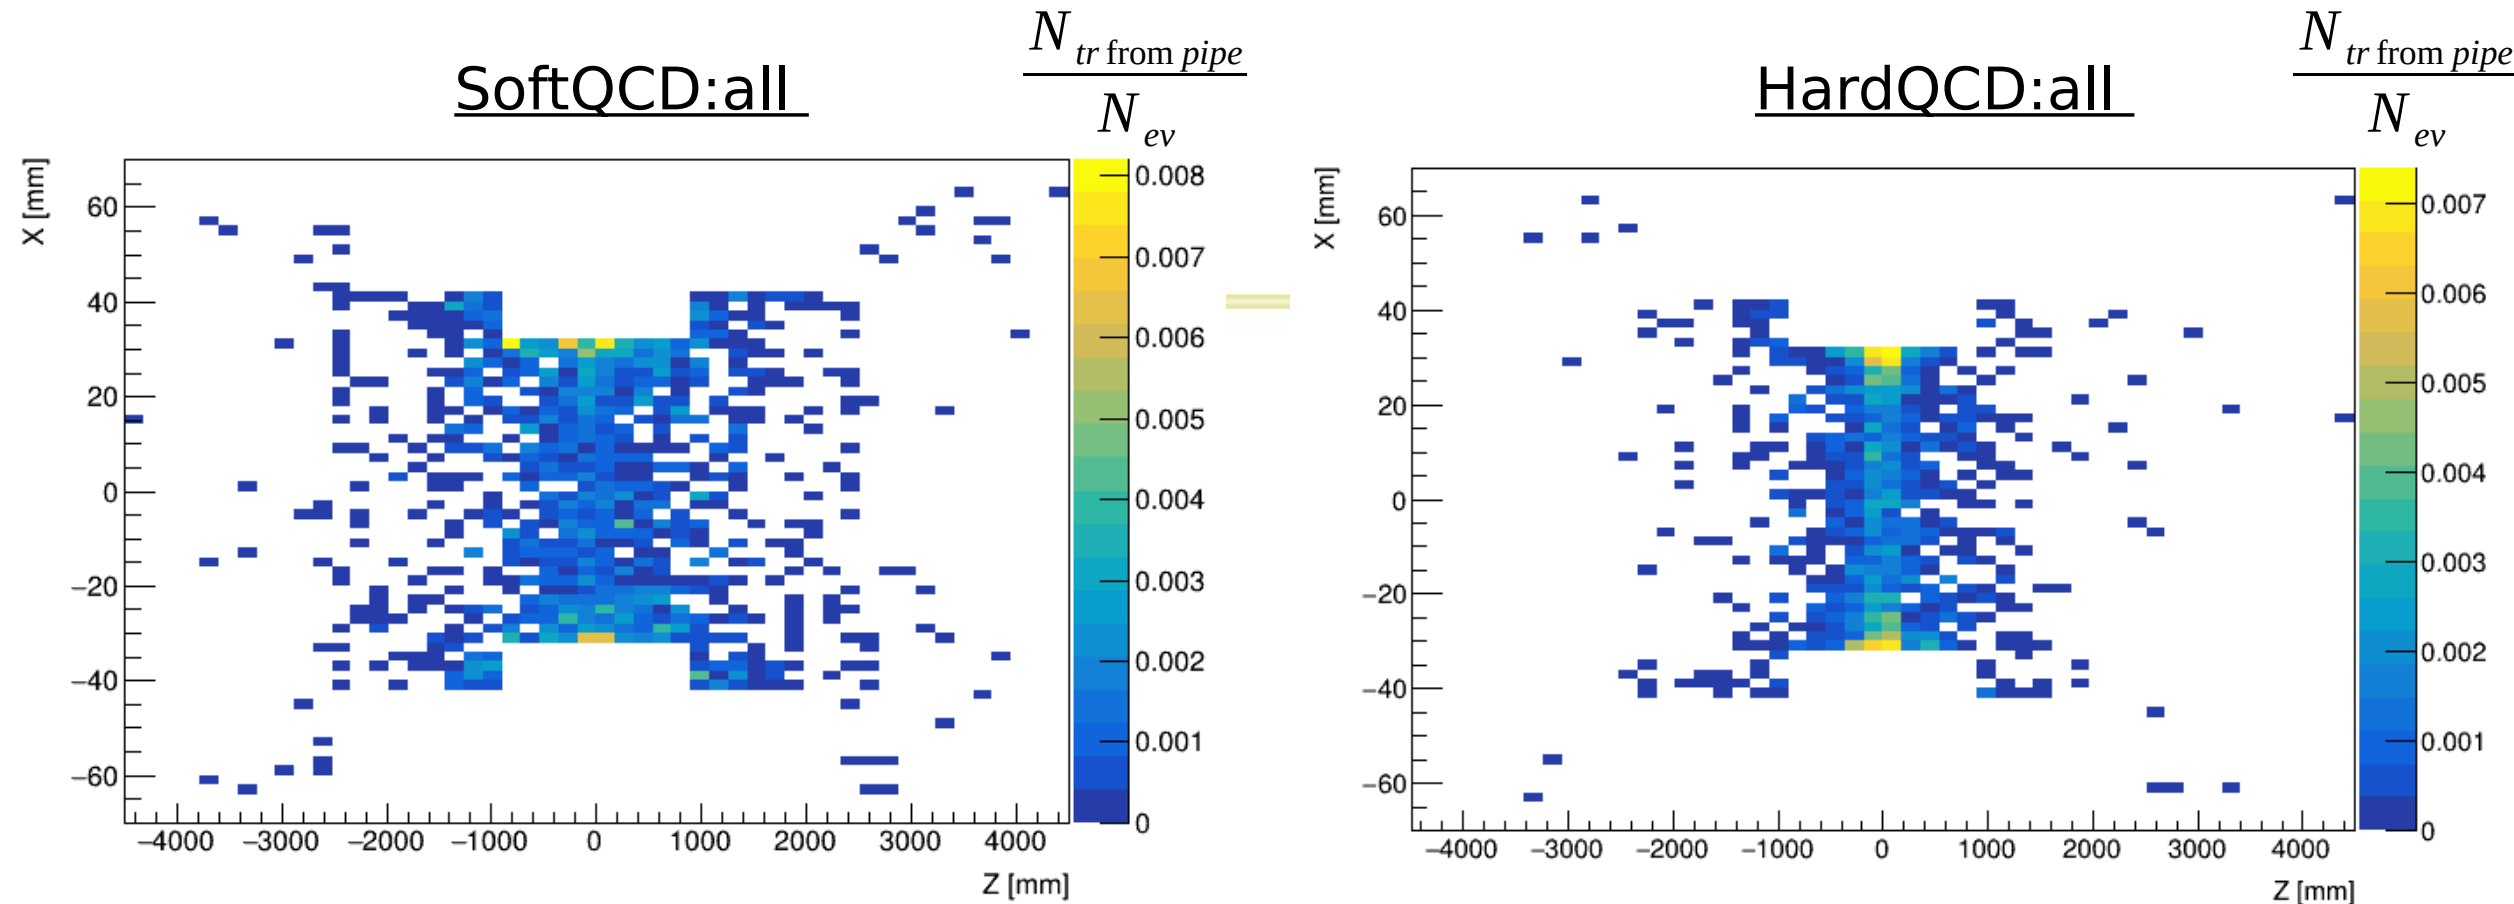

$pp, N_{events} = 10000, \sqrt{S} = 27 \text{ GeV}$

# Beam pipe: XZ-distribution

$pp, N_{events} = 10000, \sqrt{S} = 27 \text{ GeV}$

# Beam pipe: XYZ-distribution

$pp, N_{events} = 10000, \sqrt{S} = 27 \text{ GeV}$

SoftQCD:all

$\frac{N_{tr \text{ from pipe}}}{N_{ev}}$

HardQCD:all

$\frac{N_{tr \text{ from pipe}}}{N_{ev}}$

# Comparison

## 1) standard

## 2) double thickness

## 3) center beryllium

# $N_v$ in pipe/ $N_{ev}$

# $N_{tr \text{ from pipe}}/N_{ev}$

# Table of $N_{\nu \text{ in pipe}}/N_{\text{ev}}$ and $N_{\text{tr from pipe}}/N_{\text{ev}}$

SoftQCD	$\frac{N_{\nu \text{ in pipe}}}{N_{\text{ev}}}$	0.003	0.028	0.128	0.030	0.004
	$\frac{N_{\text{tr from pipe}}}{N_{\text{ev}}}$	0.001	0.058	0.295	0.057	0.001
HardQCD	$\frac{N_{\nu \text{ in pipe}}}{N_{\text{ev}}}$	0.001	0.009	0.138	0.008	0.001
	$\frac{N_{\text{tr from pipe}}}{N_{\text{ev}}}$	0.001	0.014	0.239	0.010	0.001

beryllium

SoftQCD	$\frac{N_{\nu \text{ in pipe}}}{N_{\text{ev}}}$	0.002	0.030	0.110	0.031	0.003
	$\frac{N_{\text{tr from pipe}}}{N_{\text{ev}}}$	0.001	0.061	0.177	0.058	0.001
HardQCD	$\frac{N_{\nu \text{ in pipe}}}{N_{\text{ev}}}$	0.001	0.010	0.122	0.008	0.001
	$\frac{N_{\text{tr from pipe}}}{N_{\text{ev}}}$	0.001	0.012	0.153	0.014	0.001

double thickness

double thickness

SoftQCD	$\frac{N_{\nu \text{ in pipe}}}{N_{\text{ev}}}$	0.004	0.050	0.118	0.053	0.004
	$\frac{N_{\text{tr from pipe}}}{N_{\text{ev}}}$	0.002	0.104	0.274	0.105	0.002
HardQCD	$\frac{N_{\nu \text{ in pipe}}}{N_{\text{ev}}}$	0.000	0.017	0.141	0.017	0.001
	$\frac{N_{\text{tr from pipe}}}{N_{\text{ev}}}$	0.000	0.025	0.260	0.024	0.001

# Conclusion

1) New geometry of the beam pipe was implemented in SpdRoot (fork).  
Next step is to add to master branch.

2) The results of study:

		$N_{\nu \text{ in pipe}} / N_{ev}$		$N_{tr \text{ from pipe}} / N_{ev}$	
		<u>HardQCD</u>	<u>SoftQCD</u>	<u>HardQCD</u>	<u>SoftQCD</u>
center	standard	0.138	0.128	0.239	0.295
	beryllium	0.122	0.110	0.153	0.177
right (1 sector)	standard	0.008	0.030	0.010	0.057
	Double thickness	0.017	0.053	0.024	0.105
