^b *Shandong University*

^c *Fudan University*

^d *University of South China*

- MPD-ECal introduction
- ECal module production
- Cosmic test of module
- Simulation of ECal
- Summary

MPD-ECal requirements:
 particle occupancy : $< 5\%$
 Time resolution : $< 1\text{ns}$
 Energy resolution : $< 5\%$
 @1GeV
 Operate in the magnetic FIELD :
 $\sim 0.5\text{T}$
 Adequate space resolution.

MPD-ECal

The Barrel of ECal

ECal Half-Sector

ECal 8-Zone

ECal Module

ECal Tower

The ECal-MPD

- 1 Barrel
- 50 Half-sector
- 300 8-Zone module
- 2400 Module
- 38400 Tower

- **Hardware:**
 - Construction of **8 sectors** ECal prototype. **768 modules** in total.
 - Production of FEE PCB (1800 FEEs)
 - R&D on fast readout electronics, time resolution is less than 150ps
- **Software and simulation**
- **Schedule:** 2020.6-2024.5
- **Institutes:**
 - Tsinghua University 100%
 - Shandong University 100%
 - University of South China 100%
 - Fudan University 90%
 - Huzhou University

- In the first stage (2020.6-2022.5), 8 sectors have been produced in China

8 sectors = 16 half sectors = 768 modules = 12288 towers

Modules produced in each institutes

Material: JINR: scintillator tiles
China: Other material

	1	2	3	4	5	6	7	8	Total	Progress
THU	19	19		38	96	96	96	96	460	Finished
SDU			96	58					154	Finished
FDU		77							77	Finished after cutting the fiber
USC	77								77	Finished

Module production in China

Module production in China

First container, 279 modules
(31 boxes), have been shipped from China to JINR via the China-Europe train on 2022.04.21.

Second container, 296 modules (32 boxes), have been shipped from China to JINR via the China-Europe train on 2022.09.17.

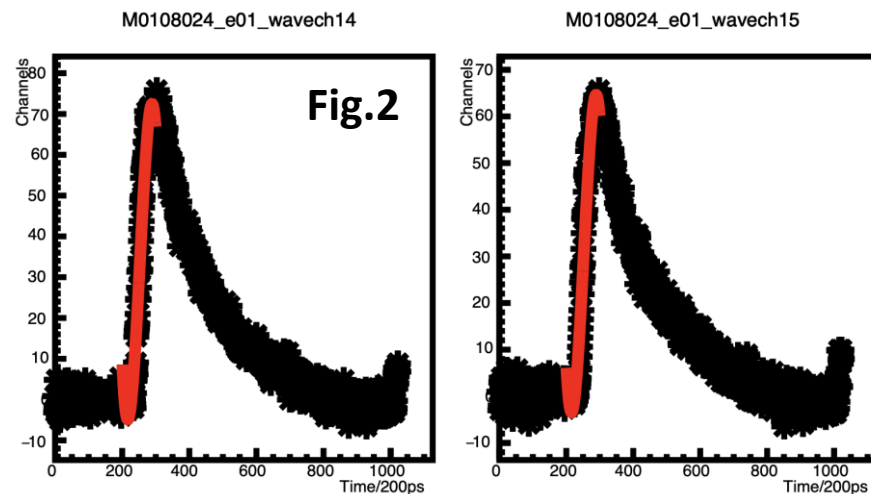

Last container, 186 modules
Zone1 77//Zone2 77// Zone5 5-1// Zone6 6-1// Zone7 15-1// Zone8 11-2 Total: 191-5

- Dr. Linmao Li from Tsinghua University will come to JINR on January 15, 2023, to focus on software development and analysis.

- 10 modules were tested during the period of August, 2022. Modules are placed horizontally (Fig. 1) in the dark rooms.
- The auto-triggering of DT5742 is used.
- ADC integrals are calculated from waveform (Fig. 2) of selected events. Peaks are extracted from distribution of integrals.

SiPM test

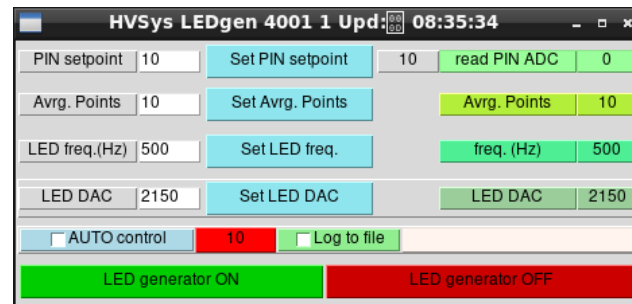

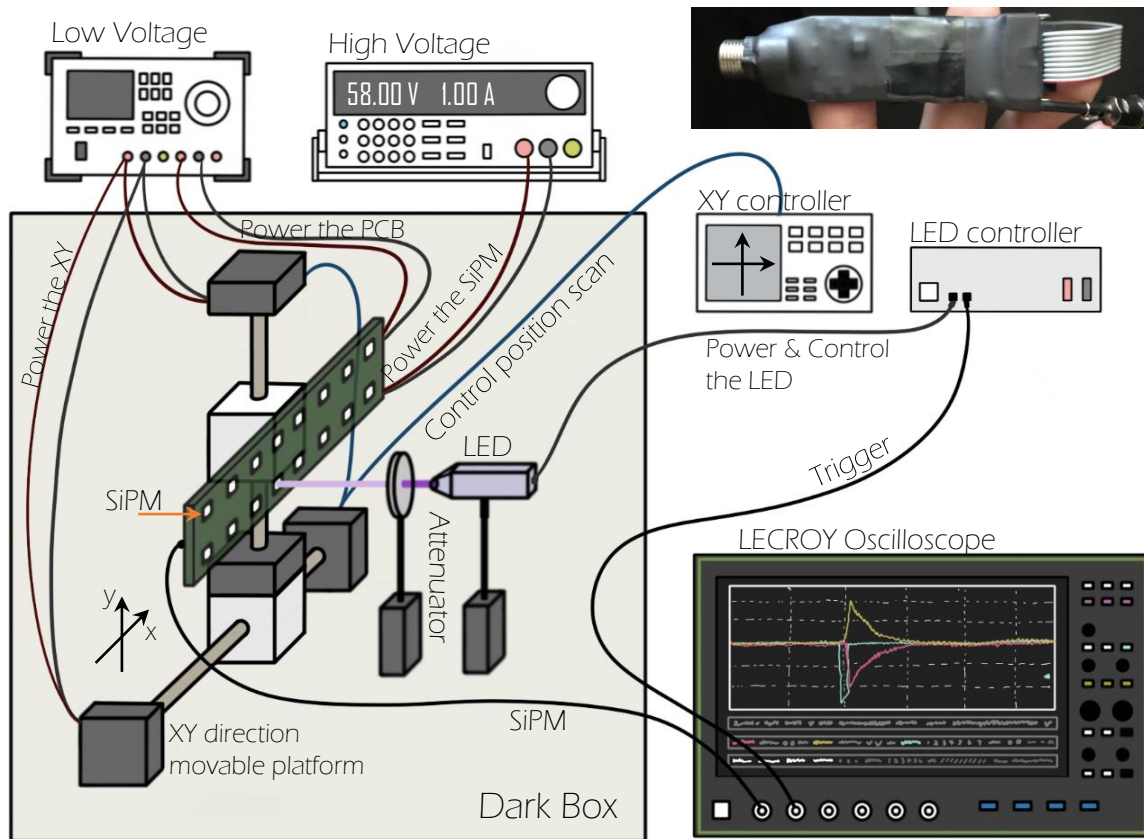

setup

XY platform (precision is 0.03mm)

LED 420nm (from JINR)

Optical Attenuator, 20X

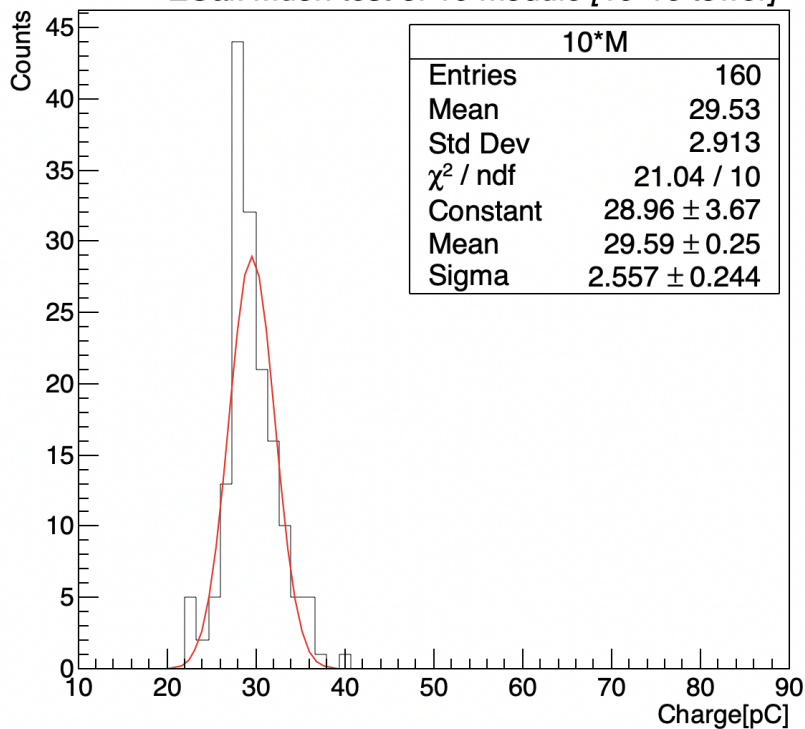

1.5*1.5m dark box

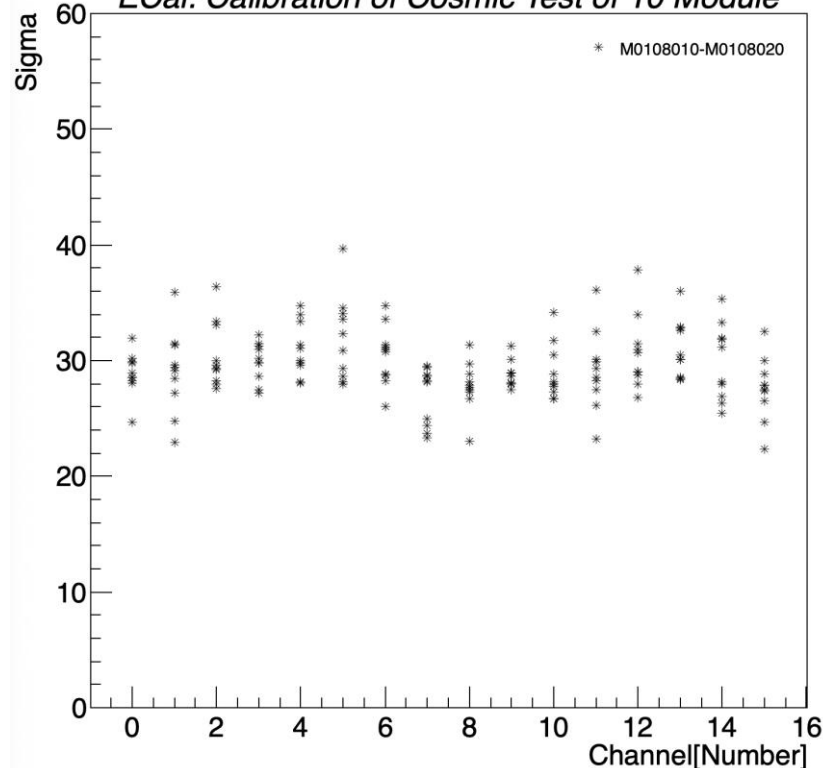

SiPM calibration

	SiPM1	SiPM2	SiPM3	SiPM4	SiPM5	SiPM6	SiPM7	SiPM8
Mean[V]	0.1213	0.1118	0.1041	0.0959	0.1031	0.1108	0.1078	0.1123
X0	378	328	278	228	178	122	66	0
	SiPM9	SiPM10	SiPM11	SiPM12	SiPM13	SiPM14	SiPM15	SiPM16

ECal: Muon test of 10 module [10*16 tower]

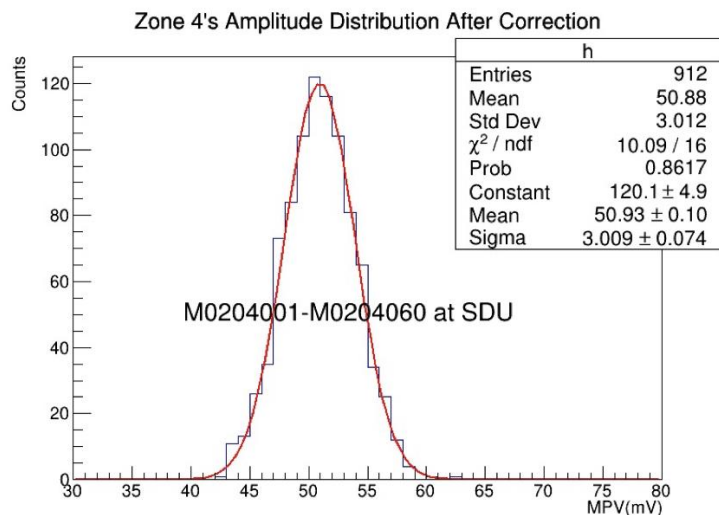

ECal: Calibration of Cosmic Test of 10 Module

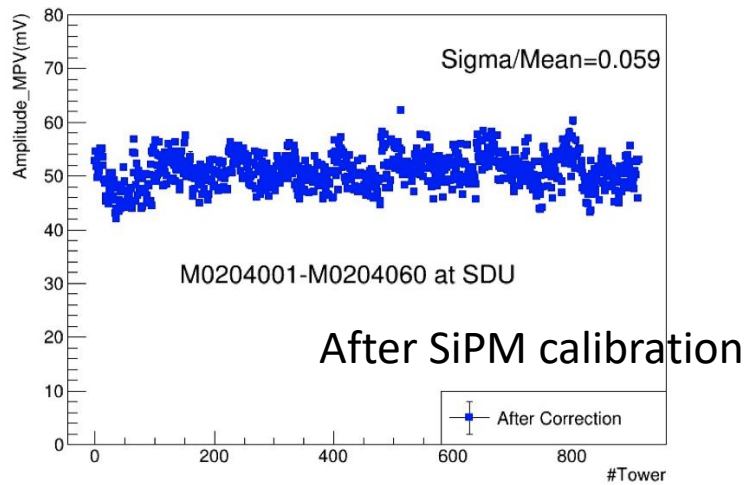

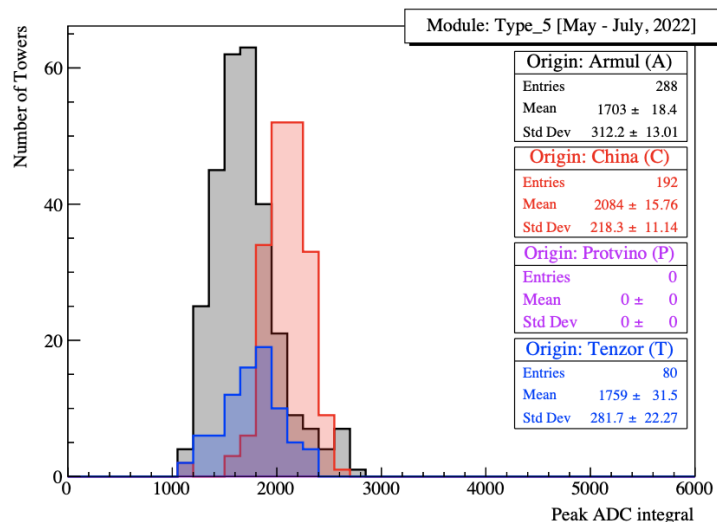

□ The cosmic test in SDU

Towers' MPV (Zone 4)

□ The cosmic test in JINR

Cosmic time test

- ▣ In order to better study the temporal resolution of ECal, a vertical ECal tower was added to the previous cosmic ray test.
- ▣ Then the time mean of the lower module can be t_0 of the upper ECal tower.

T	Before slewing	After slewing	After SiPM
Ch3-Ch4	830	382.5	380.2
Tower-Ch43	2204	642.7	610
Ch7531-Ch6420	505.8	252.5	230.1
Tower-Ch76543210	1767	549.1	424.4

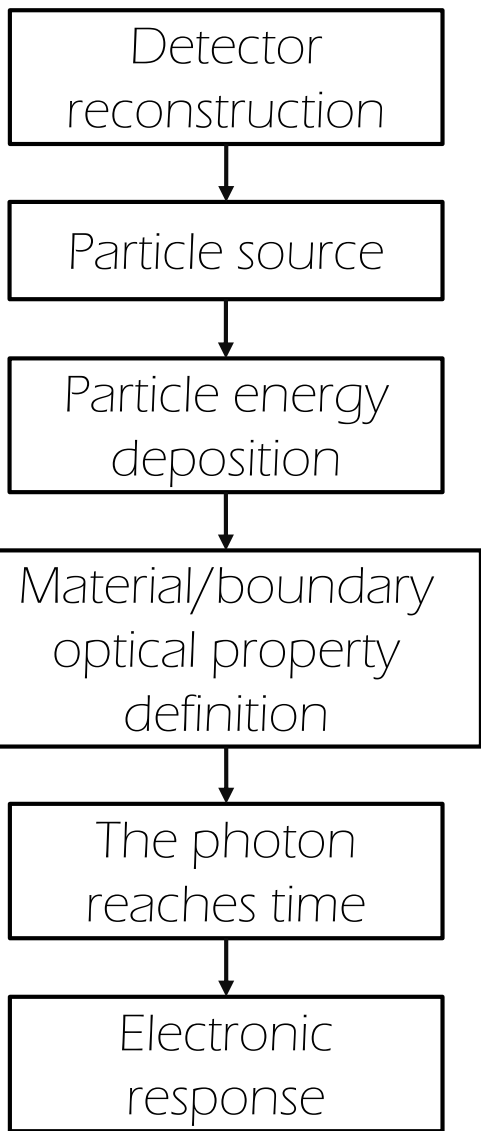

- Time resolution of one tower placed horizontally

$$\frac{T_{ch3-ch4}}{\sqrt{2}} = 270ps$$

$$\begin{aligned} \delta(T_0) &= \delta\left(\frac{\sum_{i=0}^{i=7} T_i}{8}\right) = \delta\left(\frac{\sum_{i=0}^{i=3} T_i - \sum_{i=4}^{i=7} T_i}{8}\right) \\ &= \delta\frac{(T_1+T_3 + T_5 + T_7) - (T_0 + T_2 + T_4 + T_6)}{8} \end{aligned}$$

$$\delta(T_{tower-0}) = \delta(T_{tower}) - \delta(T_0) = \delta\left(T_{tower} - \frac{(T_1+T_3+T_5+T_7+T_0+T_2+T_4+T_6)}{8}\right)$$

- Time resolution of one tower placed vertically: 356.6ps

Signal waveform comparison

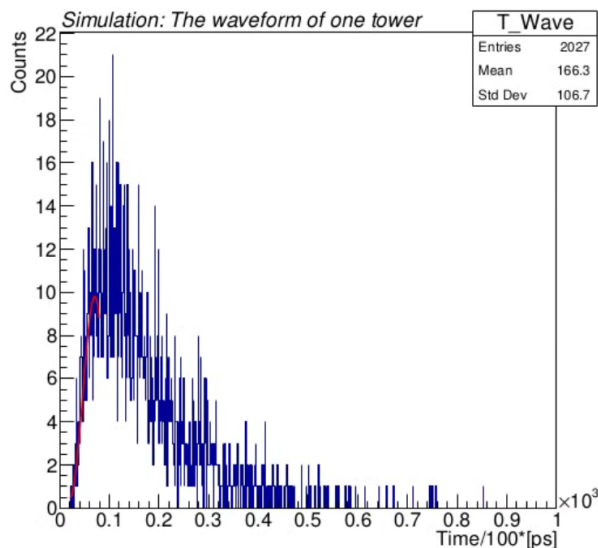

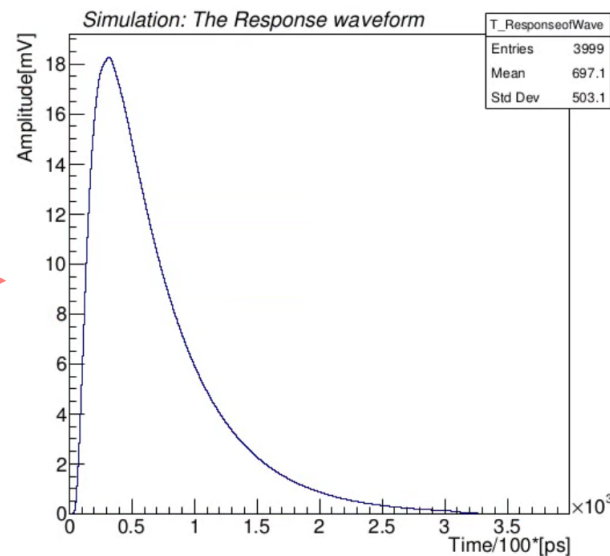

Superimpose SiPM +
electronic response +
noise on the photon
arrival time spectrum

$$f(t) = A(e^{-\frac{t}{\tau_1}} - e^{-\frac{t}{\tau_2}})$$

$$\tau_1 = 2 \text{ ns}$$

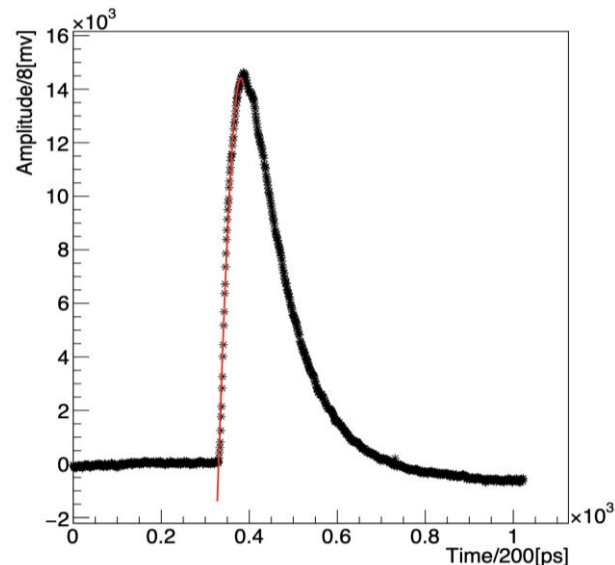

$$\tau_2 = 52 \text{ ns}$$

$$A = 0.0142 \text{ mV}$$

Beam test at DESY
Time scanning @1GeV

	The Npe@1GeV
Simulation	3276
Beam test	3230

Time resolution

The three transthreshold time distributions were corrected for time and amplitude relationships using the following formula.

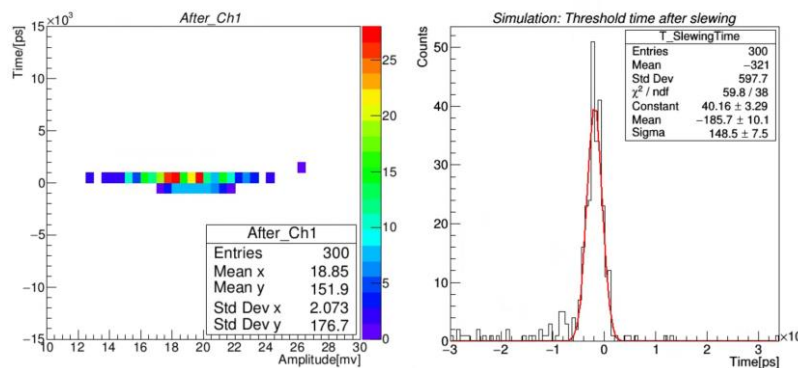

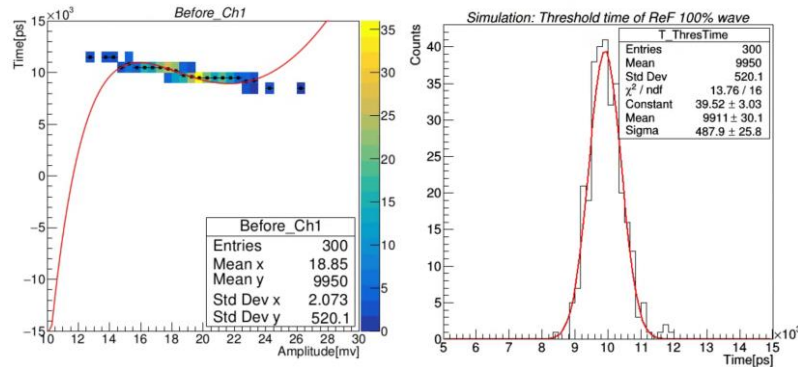

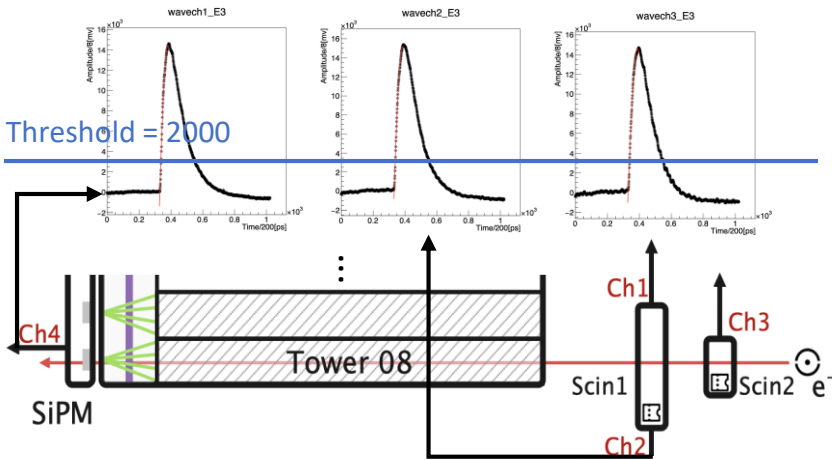

$$t = a + \frac{p_1}{\sqrt{a}} + \frac{p_2}{a} + p_3 a$$

	T-S13	S1-S3	(S1-S3)/2
Before Slewing	701	362	188
After Slewing	233	141	76

$$\delta(T_T) = \delta(T_{T-S13}) - \delta(T_{S13})$$

$$= \sqrt{(T_{T-S13})^2 - (T_{S1-S3})/2^2} = 190 \text{ ps}$$

	Correction	Time[ps]
Beam test	Before Slewing	823
	After Slewing	190
Simulation	Before Slewing	469
	After Slewing	146

- ✓ The China Group has established a **complete QA& QC system**. QA & QC of Material, Tower and Module have **reached the requirements**.
- ✓ The cosmic test results show that the light yield of different tower is **very consistent**. Time resolution is **270ps**.
- ✓ The results of the covered optical simulations are consistent with the beam test.
- ✓ **575 modules produced in THU** and SDU have been shipped to JINR, now is arrived. 2 more containers will be shipped to JINR as soon as possible.
- ✓ **100% module** have been completed in China.
- ✓ The third container will be sent out by **December 2022**.
