Hardware of SRC setup

What is Slow Control System?

- Monitoring of the experimental hardware;
- Centralized control of the Slow Control equipment (LV, HV, gas flow etc.);
- Archiving Slow Control data;
- Alarm system.

Not a Slow Control:

- Main data stream (data taking);
- Event builder (reconstruction)/event display;
- Data quality;
- Run control.

How we can build SC?

Tango Controls

Tango Controls is an object oriented, distributed control system. It is a framework for building custom SCADA systems. Tango defines communication protocol and API. It provides libraries, set of GUI tools and drivers (so called [Device Servers](http://www.tango-controls.org/what-tango-controls/)) for variety of standard and specific control equipment. For more information see: <http://www.tango-controls.org/what-tango-controls/>

- Multiplatform
- Archiving service
- Access control service
- Logging service
- Alarm service
- Configuration tool
- Administration tool

TANGO 

Who use Tango Controls

Институт ядерной физики
имени Г. И. Будкера СО РАН

Elettra Sincrotrone Trieste

What is Tango Controls

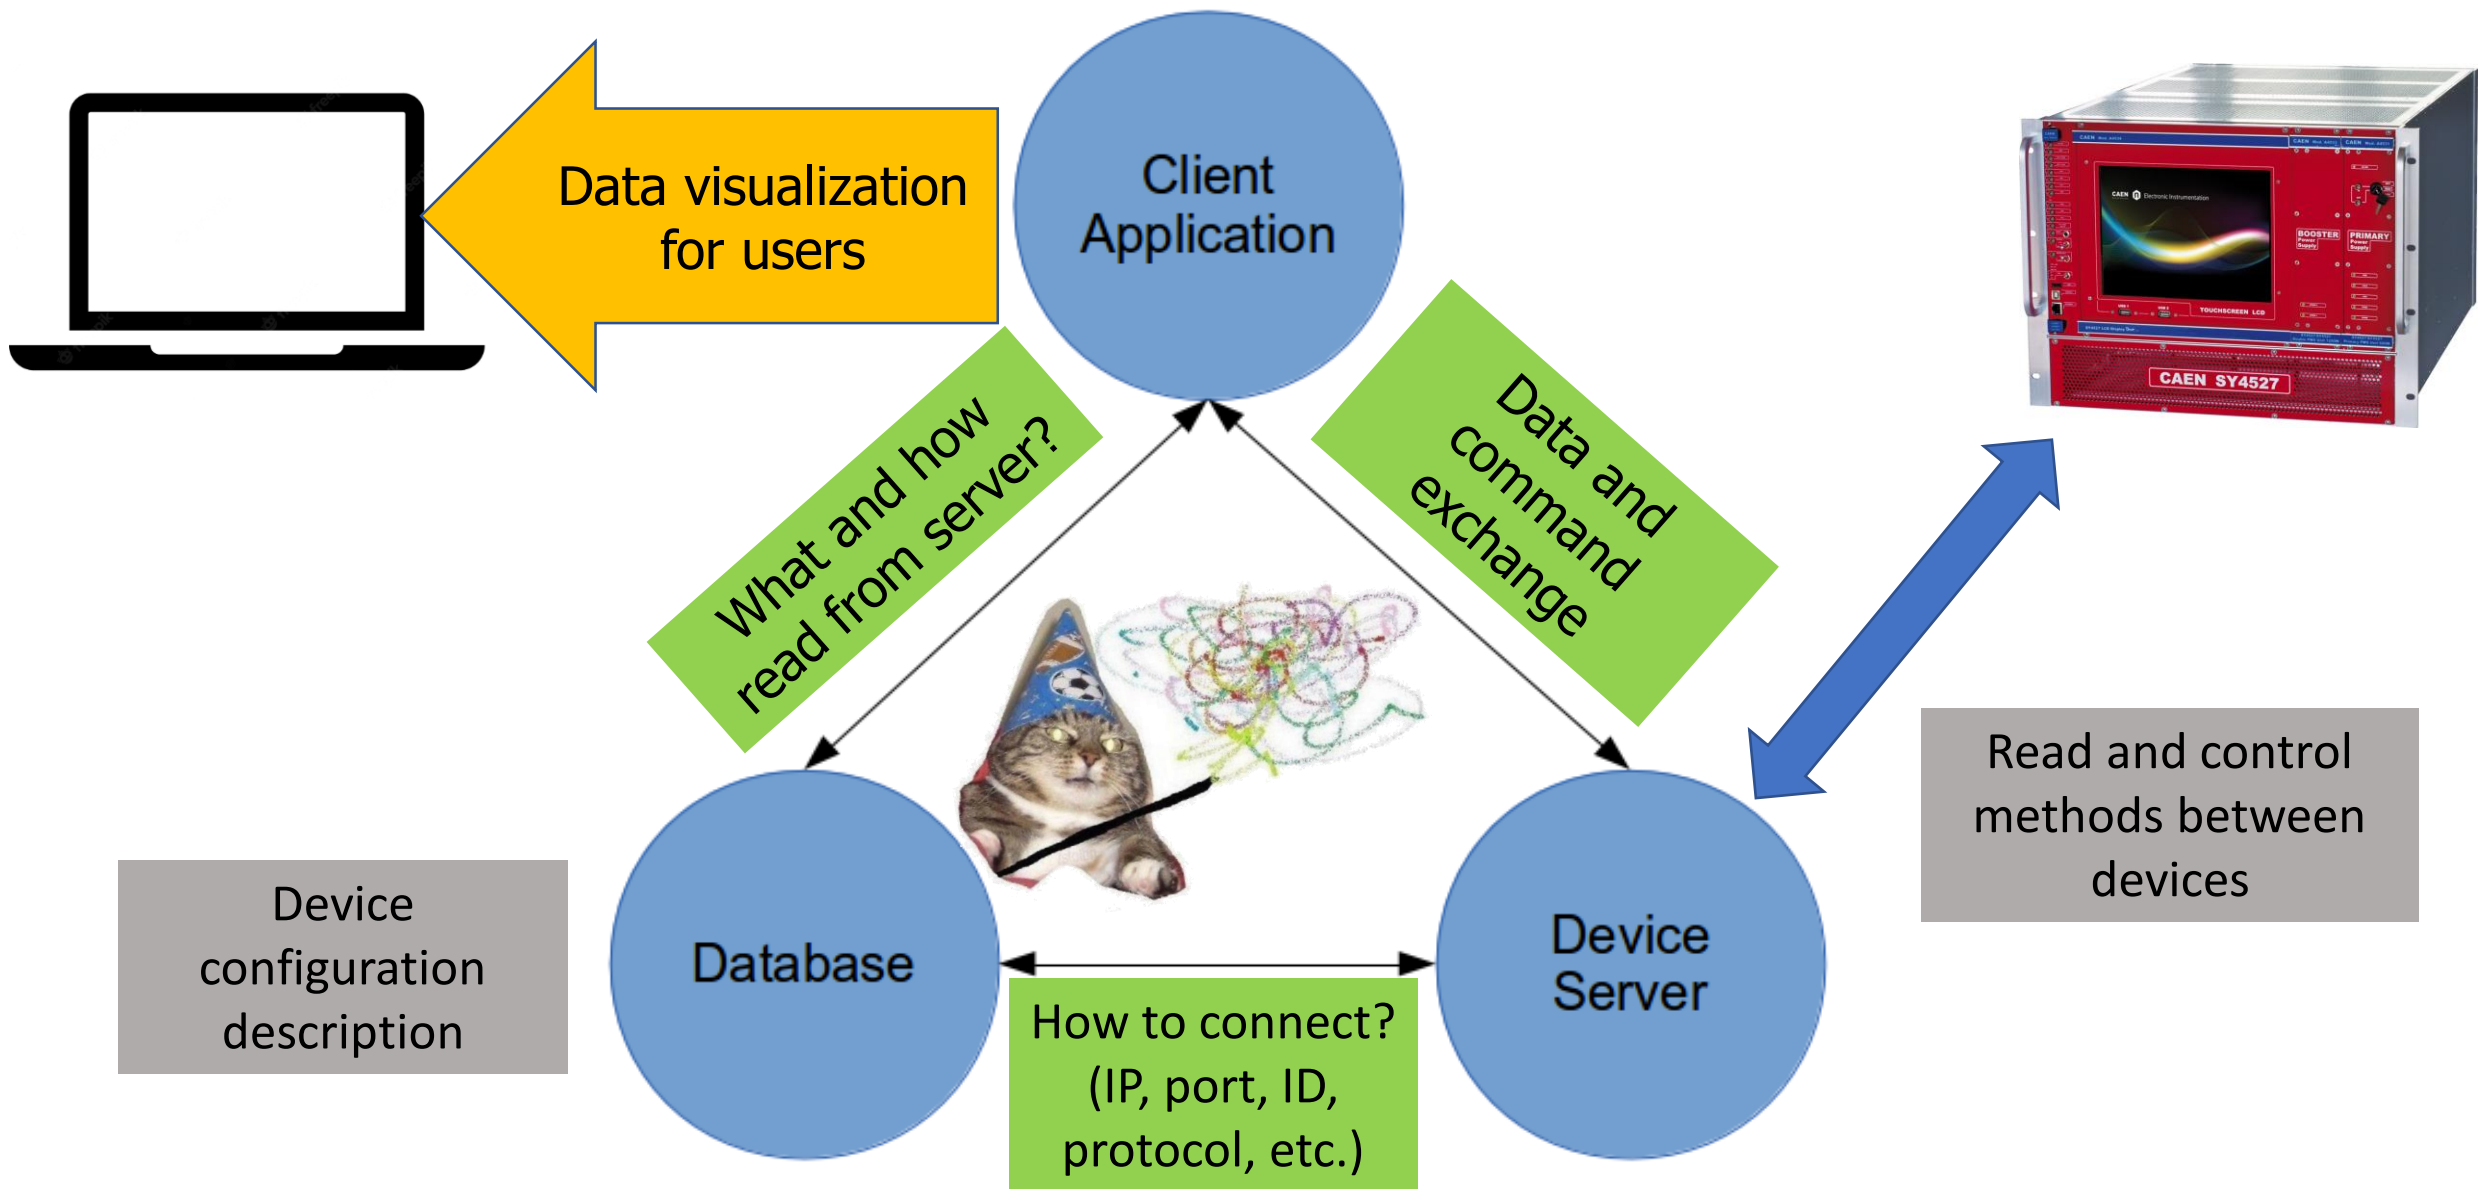

TANGO is based on the 21 century technologies :

- CORBA and ZMQ to communicate between device server and clients
- C++, Python and Java as reference programming languages
- Linux and Windows as operating systems
- Modern object oriented design patterns
- Naturally implements a microservices architecture
- Unit tested, continuous integration enabled
- Hosted on Github (<https://github.com/tango-controls>)
- Extensive documentation + tools, large community

What is Tango Controls

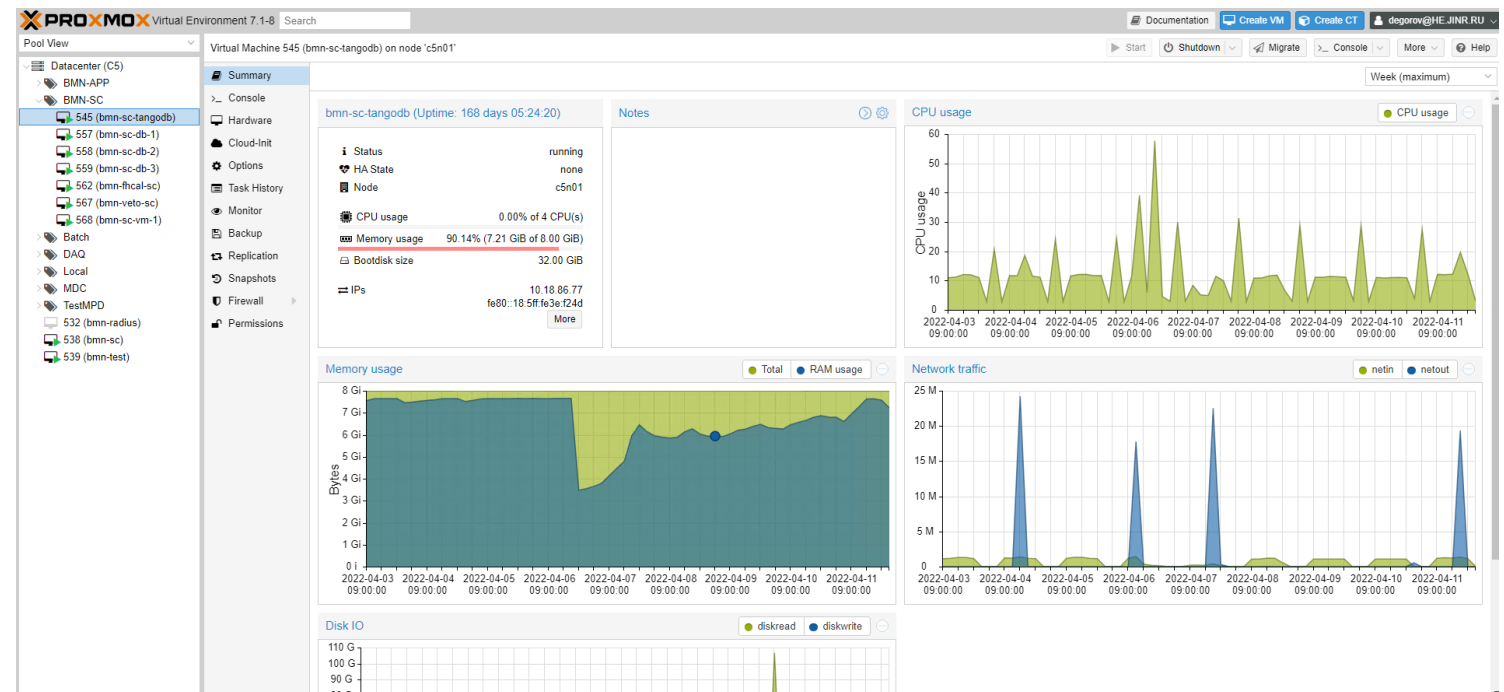

Infrastructure – computing, devices, interfaces...

At present time the service layer tasks uses existing MPD/BM@N computing farm. Virtualization is done using PROXMOX Virtual Environment.

All centralized services are running on dedicated VM's

Front-end layer includes a wide variety of devices which are uses different buses and protocols, such as PXI, Ethernet, RS-485, RS232 etc.

Ansible

ANSIBLE

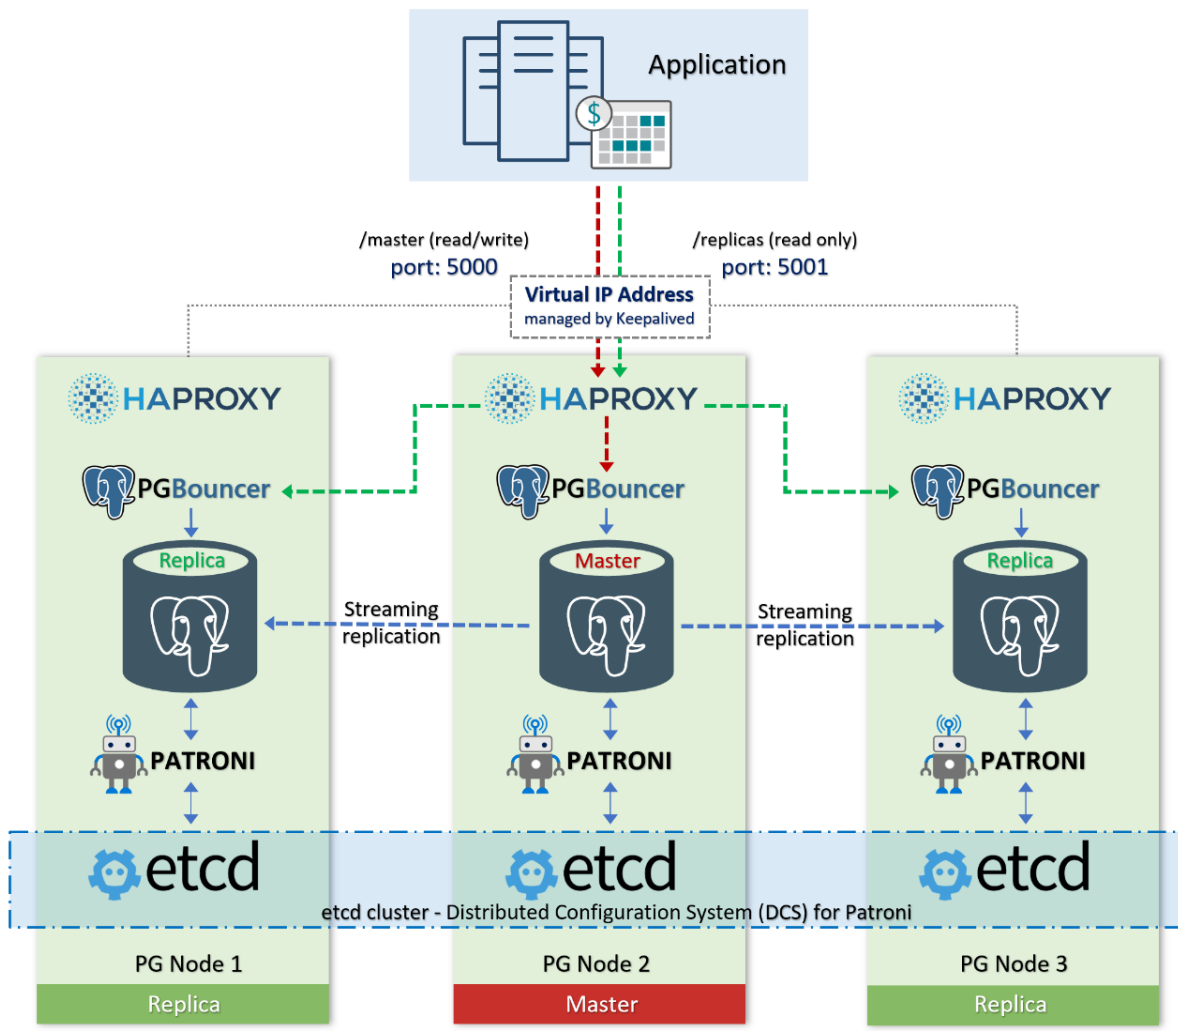

Ansible is a software solution for remote configuration management. It allows you to configure remote machines.

- System configuration;
- Tango installation;
- Libraries installation and database configuration;
- Libraries installation and configuration of the Python development environment.

```
- name: deploy_tango
hosts: bmn
vars_files:
  - vars/main.yml
become: yes
roles:
  - system
  - tango
  - hdb
  - pytango
```

Database cluster(PostgreSQL)

Scale-Out PostgreSQL with read replicas

https://github.com/vitabaks/postgresql_cluster

Data visualization

Grafana is a free software data visualization system focused on IT monitoring systems data. It is implemented as a "dashboard" style web application with charts, graphs, tables, alerts.

SRC Slow Control

SRC Slow Control

Conclusions

- This slow control system successfully worked the entire session of the SRC;
- This system will also work for the upcoming BM@N session. At this point, additional devices are being implemented that were not present in the SRC session
