

# Film digitization

## Contrast stretching method

Tulgaa Turtuvshin

ATLAS-JINR FCalPulse project meeting

2 February 2023

Adobe  
**Photoshop**

Dimension: **560x600** pixels OR **22.05x23.62** mm

# Background removal algorithm using linear interpolation

$$x_1 = 80 \div 100$$

$$x_2 = 420 \div 440$$

- 1) Draw 2 lines outside of the exposure area
- 2) Define RGB color codes on red lines.
- 3) Remove area between the lines.
- 4) Connect dots between the lines using **polynomial function** and fill the area to define background
- 5) Subtract background values from original image

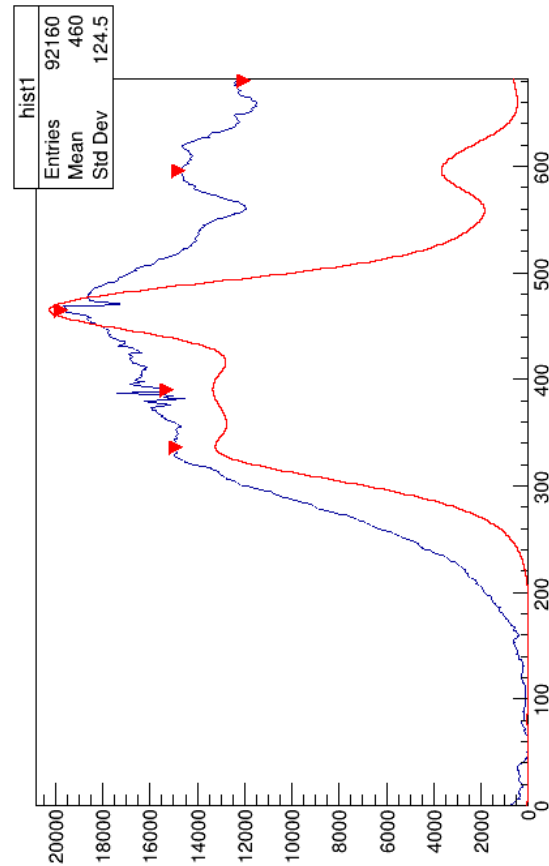

Original images:

After removing backgrounds:

# Alignment method

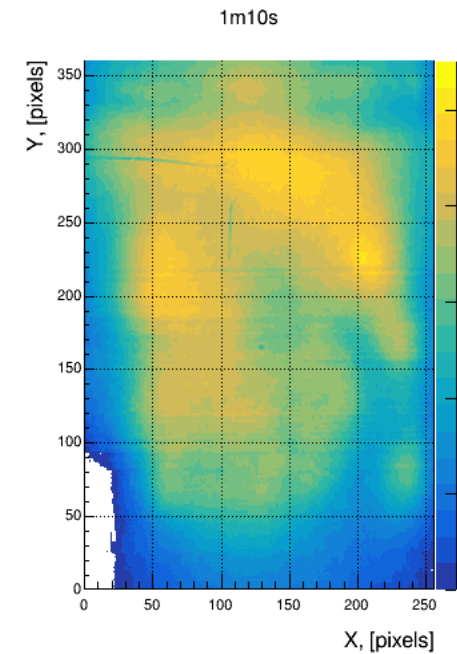

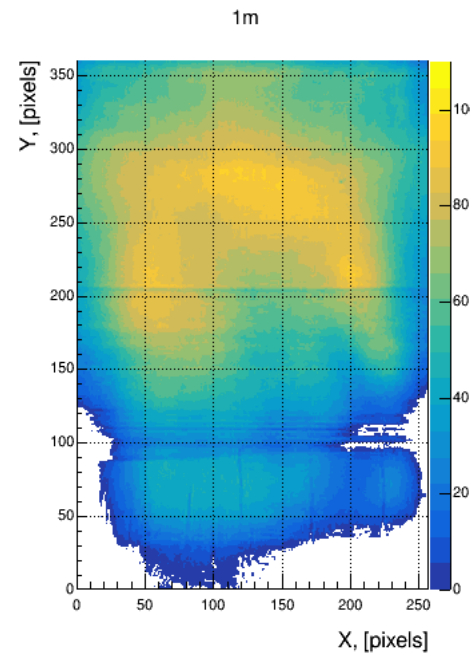

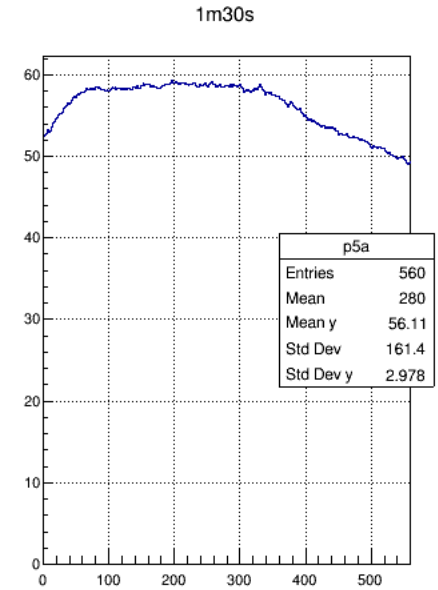

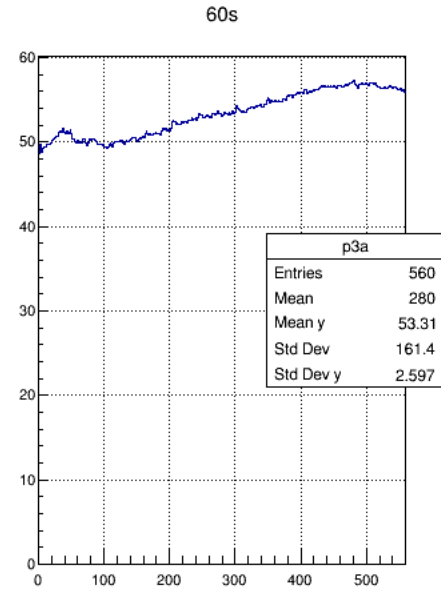

Active part is made from copper foil with the following dimensions:  
 $10,0 \pm 0,1 \text{ mm} \times 13,9 \pm 0,1 \text{ mm}$

Our selected area: 256 pixel x 360 pixel OR  $10.08 \text{ mm} \times 14.17 \text{ mm}$

# Background removal method using TProfile along x-axis

# Linear interpolation method

# After alignment and background removal:

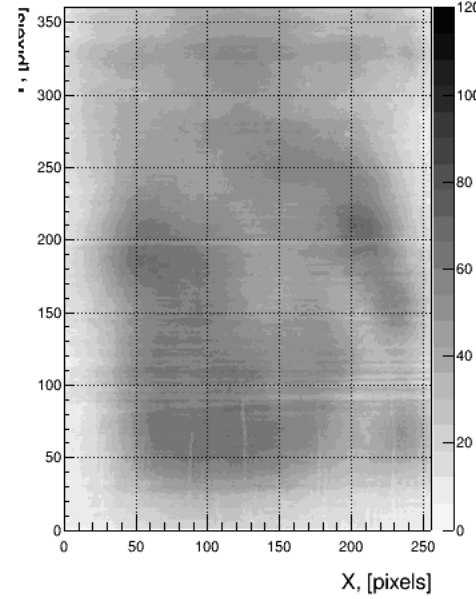

30s
