Trigger efficiency simulation

- Request 26 configuration
- DCM-QGSM-SMM is run in FXT mode at two energies: $E_{\text{lab}} = 2.0 \cdot A \text{ GeV}$ and $E_{\text{lab}} = 5.5 \cdot A \text{ GeV}$
- Two target positions were considered:
 - ✓ $x = 0, y = 0, z = -150 \text{ cm}$ → full detector configuration, all FFD-W materials changed to air (no detector)
 - ✓ $x = 0, y = 0, z = -115 \text{ cm}$ → full detector configuration
- 30,000 events for each energy and target location
- Three subsystems for trigger formation:
 - ✓ FFD-E (FFD-W ignored)
 - ✓ FHCAL-E (FHCAL-W ignored)
 - ✓ TOF, use fast logical signals from 280 MRPCs (fires if at least one hit detected in the whole MRPC chamber)
