Λ reconstruction in MC Request 25 production

V.Kolesnikov, D.Suvarieva, V.Vasendina, [A.Zinchenko](#)

PWG2

Data set in 25 production

- ✓ **Generator:** UrQMD, Min.bias, Bi+Bi @ 9.2 GeV, 20M
- ✓ **Reconstruction & Analysis:** hyperon wagon in the analysis train
- ✓ **PID:** A.Mudrokh's implementation, no PID for protons @ $p_T > 2.5$ GeV/c
- ✓ **Selection:** $|y| < 0.5$, $Z_{PV} = \pm 130$ cm
- ✓ **p_T -bins:** 0.25-0.5-0.75-1 ... 5
- ✓ **Centrality bins:** 0-10%, 10-20%, 20-40%, 40-60%, 60-80%

Lambda selection cuts

- ✓ $l0.chi2s[][0] > 8.0$ – normalized pion-to-primary vertex impact parameter
- ✓ $l0.chi2s[][1] > 5.0$ – normalized proton-to-primary vertex impact parameter
- ✓ $l0.chi2h < 7.0$ – chi2 of secondary vertex reconstruction
- ✓ $l0.path > 2.0$ – lambda decay path
- ✓ $l0.angle < 0.08$ – lambda momentum and primary-to-secondary vertex vector noncollinearity

$p\pi$ invariant mass and Λ phase space

100k, all centralities

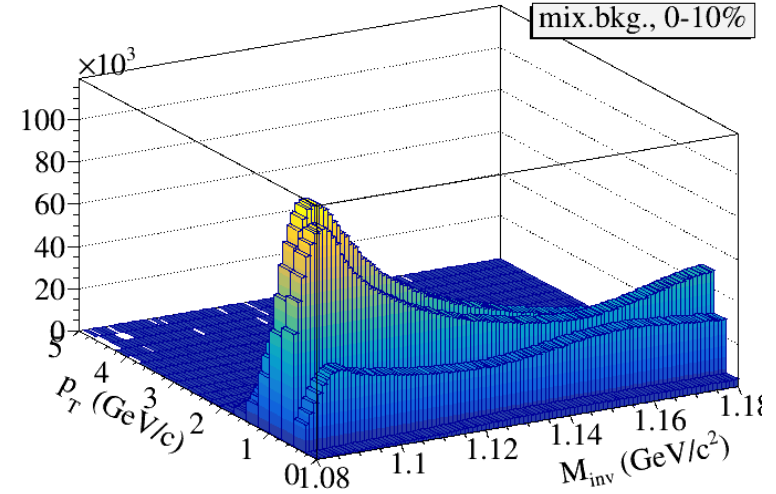

10M, all centralities

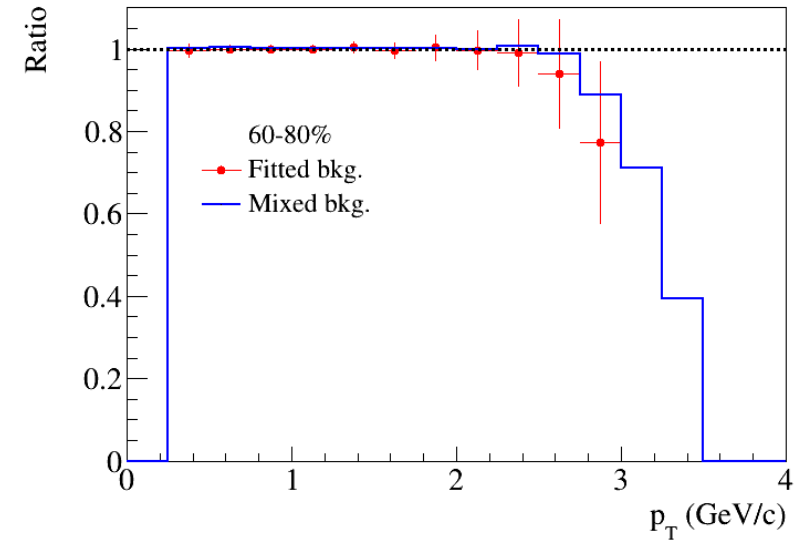

$\rho\pi$ invariant mass in p_T -bins for different centralities

Background subtraction: fitted or mixed

Extracted-to-true signal ratio: fitted vs mixed background

Proton identification

With and without protons PID @ $p_T > 2.5$ GeV/c, Bi+Bi, 2M, all centralities, $|\eta| < 0.5$

Λ selection at large p_T

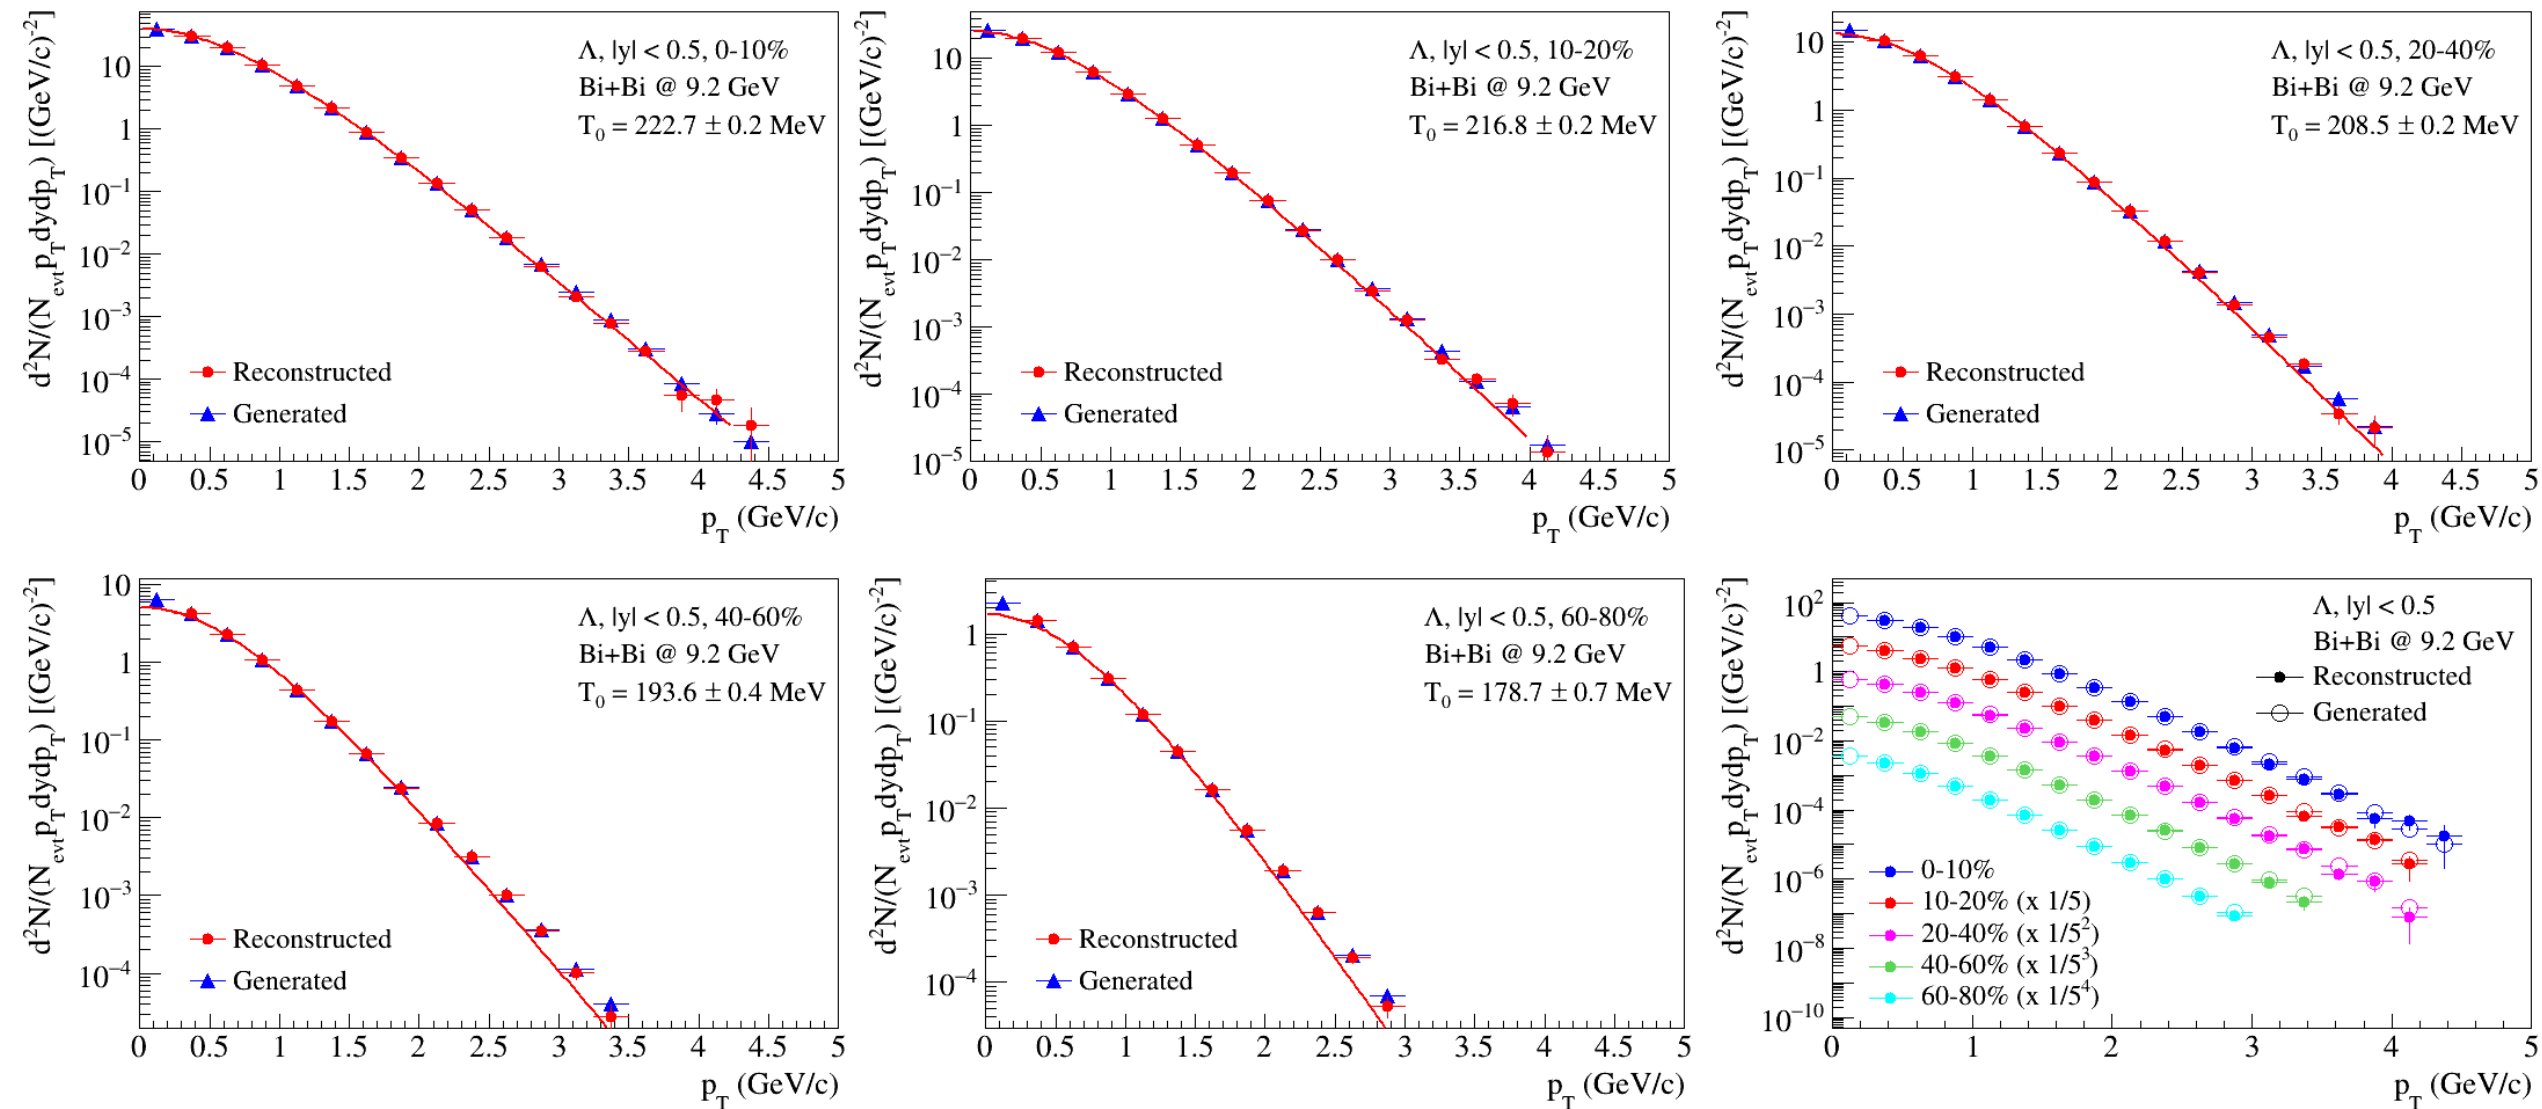

With and without protons PID @ $p_T > 2.5$ GeV/c, Bi+Bi, 2M, all centralities, $|\eta| < 0.5$

Lambda efficiency

Invariant p_T -spectra of Λ in centrality bins

Summary and Plans

- ✓ **Lambda hyperon analysis seems to be quite mature**
- ✓ **Other hyperons are on the way to their wagon(s)**
