

JOINT INSTITUTE
FOR NUCLEAR RESEARCH

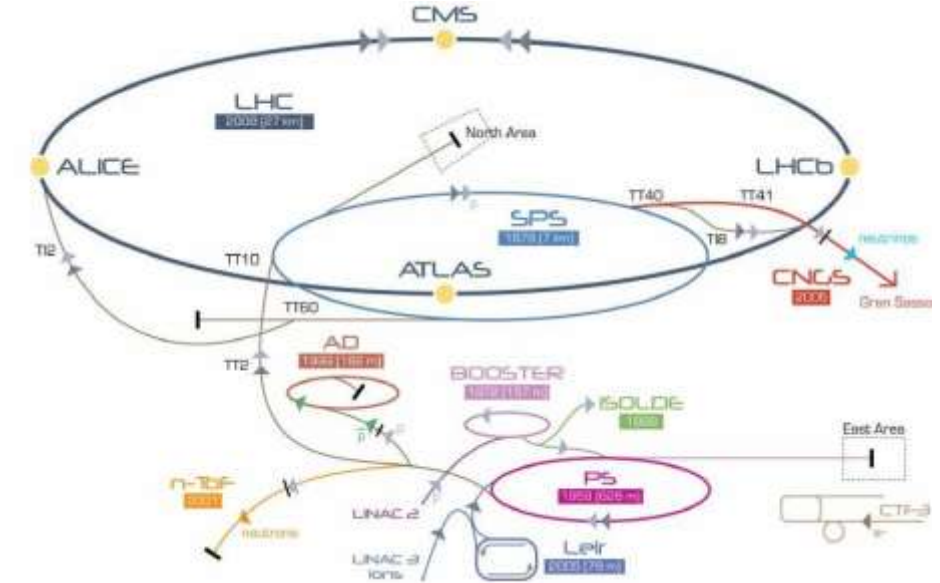

Comparison in automation field

Baldin Nikita,
Dubna, October 2023

A comparative of **work environment**
and **work organization**
at the LHC and the NICA acceleration complexes

NICA
acceleration complex

LHC
acceleration complex

A comparative of **Detector Control Systems (DCS)**
of the BM@N at JINR and the ALICE at CERN experiments

BM@N
Experimental facility

ALICE
Experimental facility

what would be the
basis of comparison?

worldwide experience

research publications

international standards

industry standards

No	Future	LHC	NICA
Section 1: Physical Environment / work environment			
1	Number of control rooms		
2	floor area		
3	number of working areas		
4	Number of workstations		
5		
Section 2: Organizational Structure			
8	Number of personnel		
9	Types of Personnel		
10	...		
Work Processes			
Information and Technological Services			
Training Programs and Knowledge Assessment			
Reporting systems			
Technical Support / Communication and Coordination / Change Management Systems / Risk Management			

No	Future	ALICE	BM@N
Section 1: Deployment Characteristics / Architecture / Topology / Layout			
1	number of subsystems		
2	number of detectors		
3	Number of internal services		
4	Number of external services		
5		
Section 2: Hardware			
8	Number of front-end electronic		
9	number of the PLC's		
10	number of crates		
	...		
Section 3: Software			
Logical algorithms / automation functions			
HMI GUI			
Organization			

What to do

1. Create a well-structured comparison matrix

2. Find measurable values of comparative parameters

3. Format in the publication's document
