

Production of leptonic bound states in Higgs boson decay

четверг, 4 апреля 2024 г. 13:30 (20 minutes)

The production of single and paired lepton bound states in the decay of the Higgs boson has been studied. The decay widths are calculated taking into account relativistic effects.

Presenter: ФЕДОР МАРТЫНЕНКО

Session Classification: Физика на протон-протонных и e+e- коллайдерах
