59 modules with 32/16 strips

Time correction

- Select protons by mass
- For each selected proton calculate theoretical time of flight by length (L) and momentum (p)

$$T_{\text{theor}} = \frac{L \cdot \sqrt{m^2 + p^2}}{p \cdot c}$$

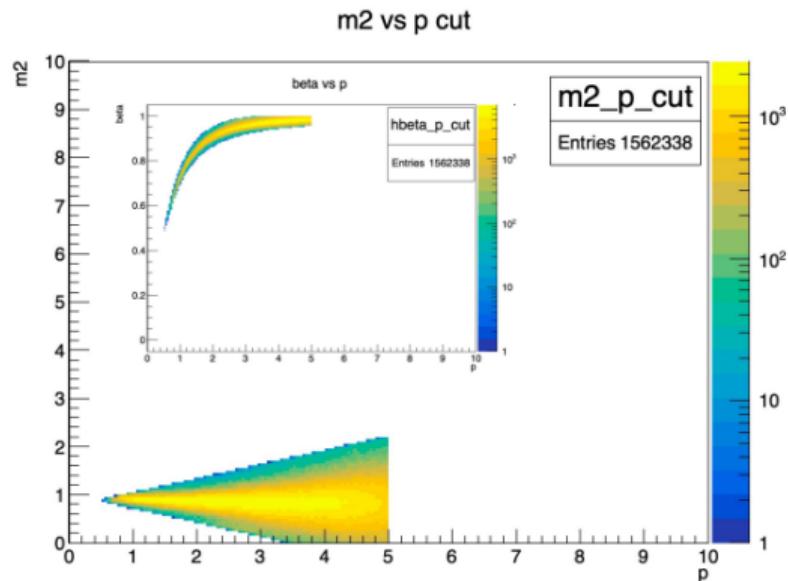

- Calculate time correction

$$\Delta T = T_{\text{theor}} - T_{\text{TOF}}$$

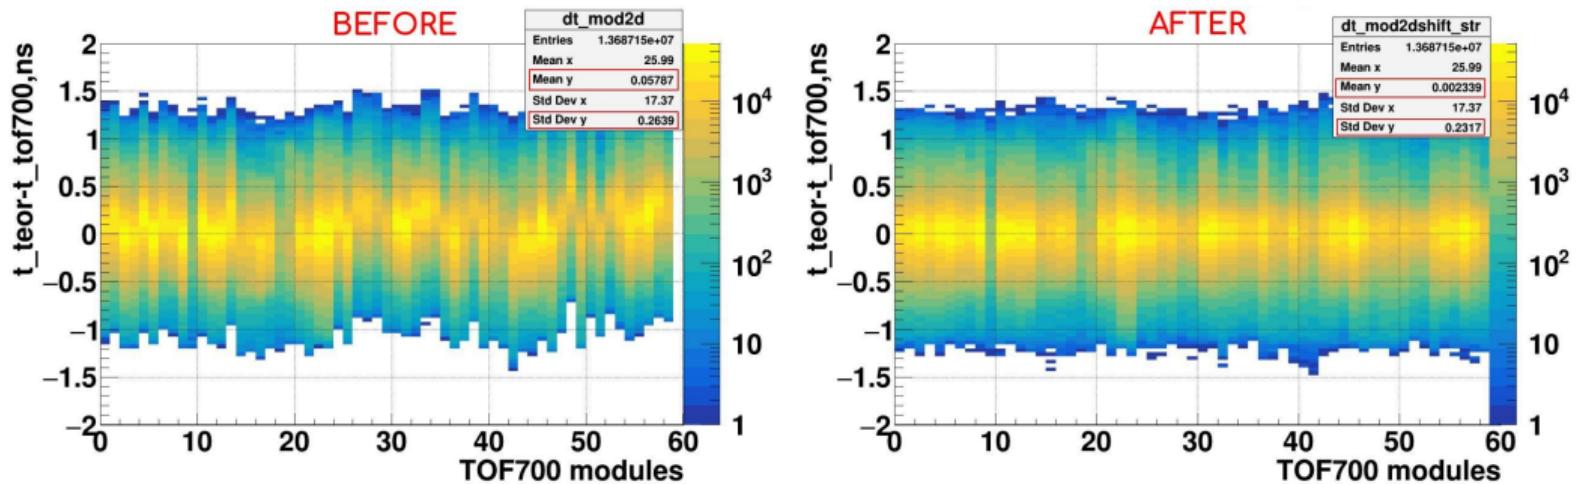

- Use ΔT to correct T_{TOF} for each particles

Repeat independently for each module (59) / strip (32 \times 59)

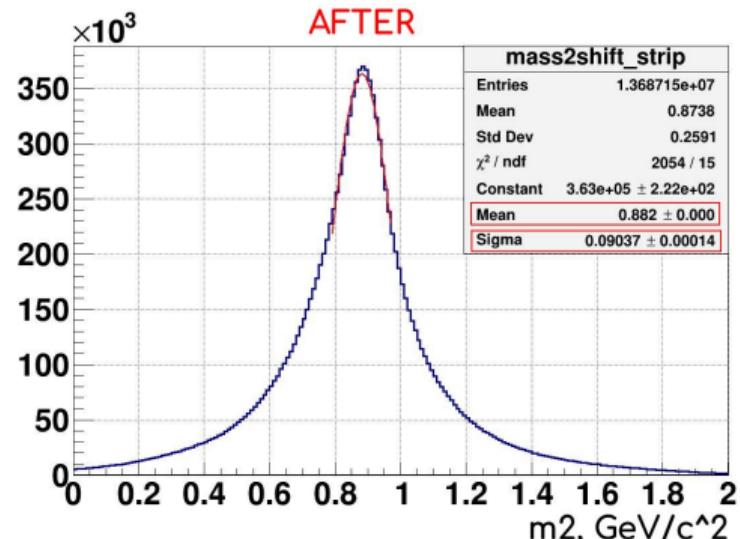

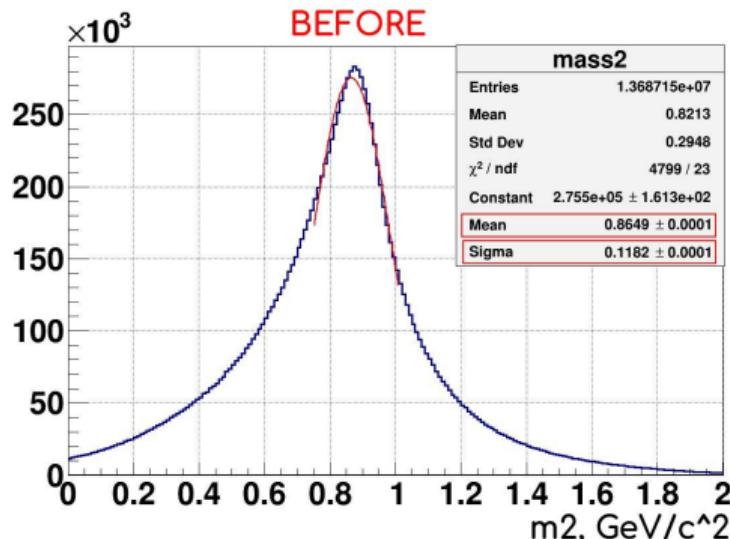

Used statistics: 1e6 events

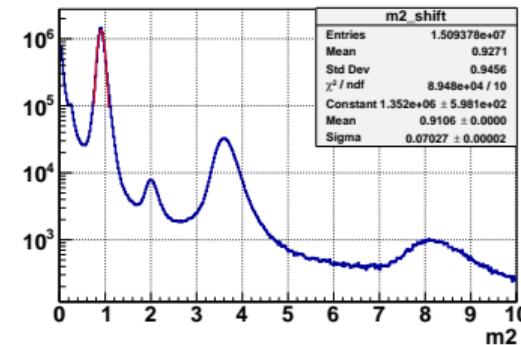

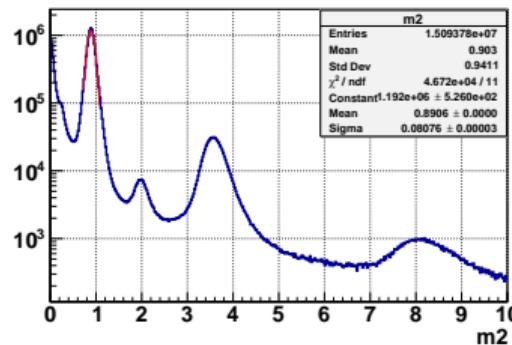

Time difference for protons by modules

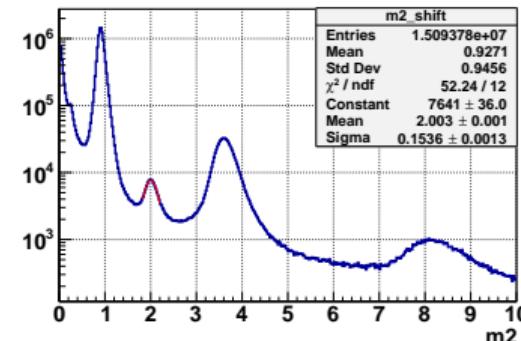

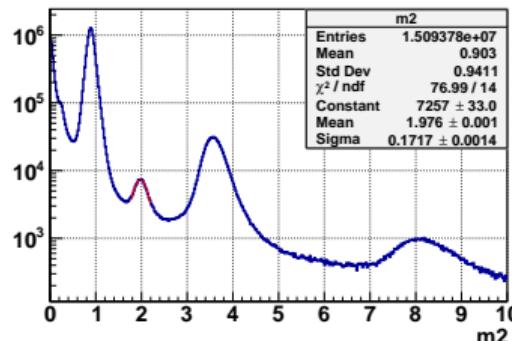

Mass for protons

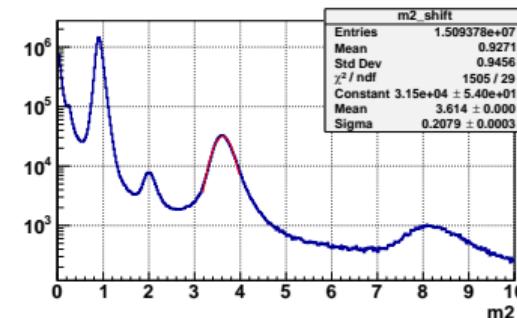

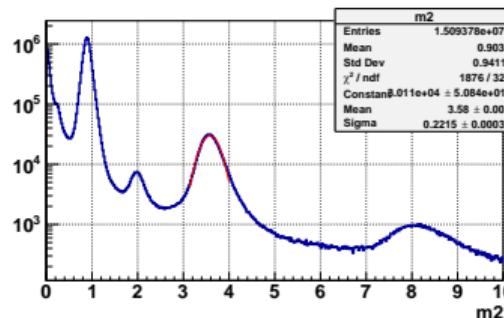

Proton mass (0.880)

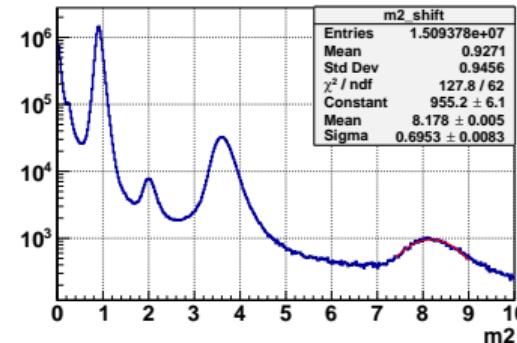

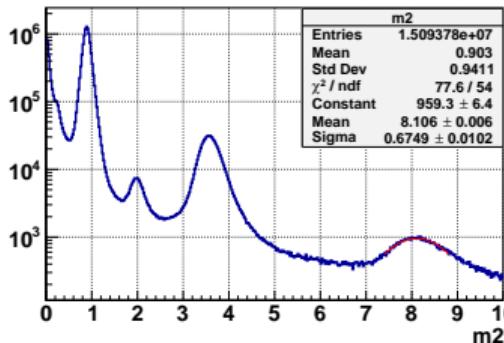

He3 mass (1.980)

Deutron mass (3.519)

Tritium mass (7.919)

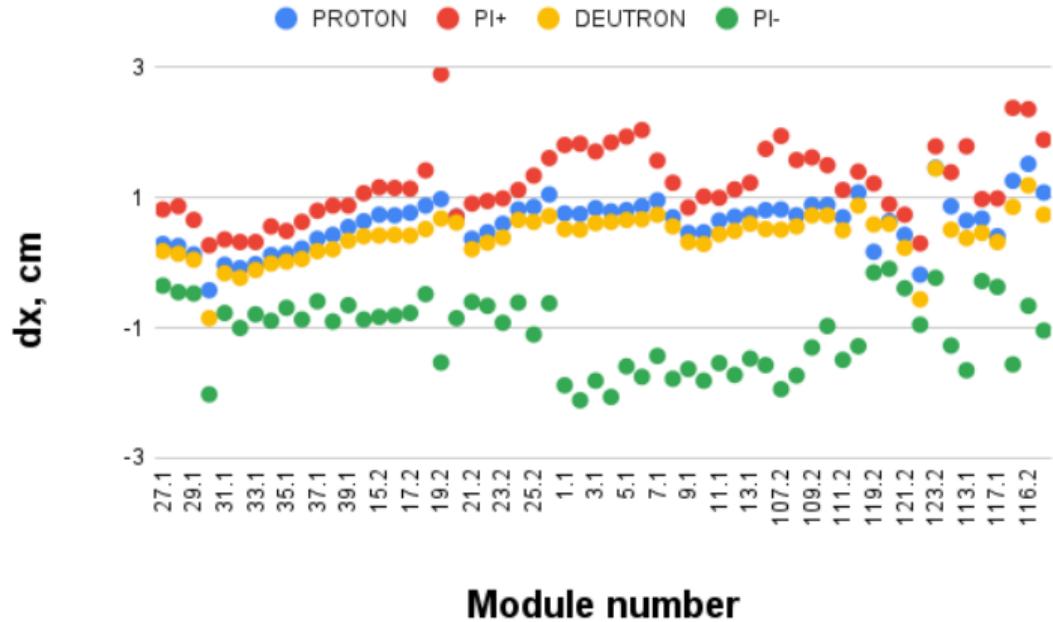

Coordinate correction

The next conditions and cuts were used

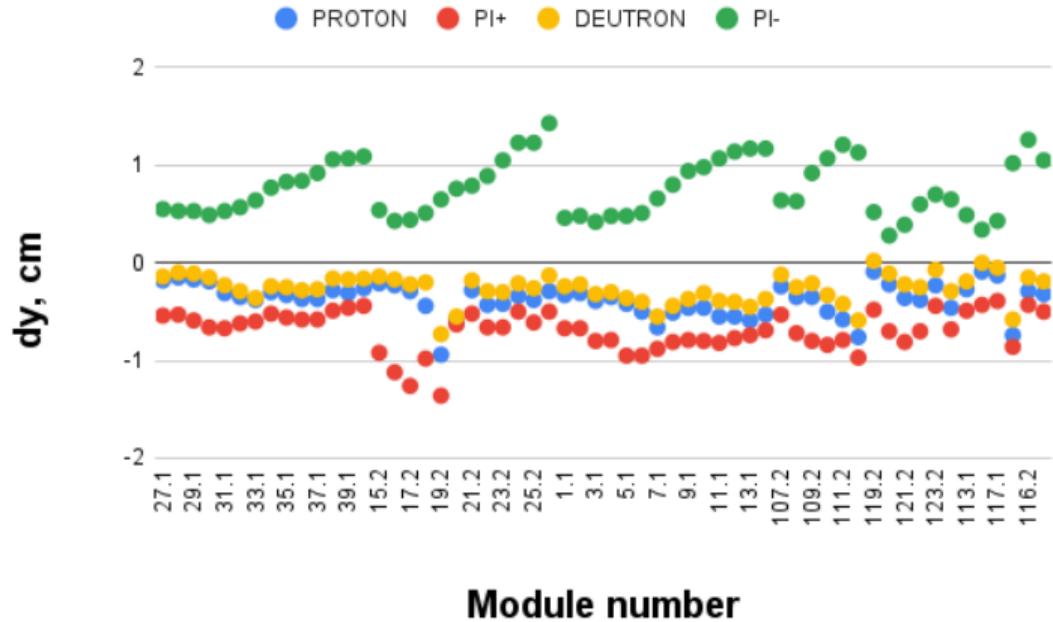

- $\approx 22\text{e}6$ events
- At least **2 tracks** in primary vertex
- $-1.0 < \text{PV}_X < 1.5$
 $-1.0 < \text{PV}_Y < 1.2$
 $-0.5 < \text{PV}_Z < 0.5$
- At least **5 hits** on track
- Time corrections implemented

Matching

- Propagate track to PV_Z, if distance between PV and track on PV_Z more than 1.0 cm, skip track
- Propagate track to TOF-700 planes
- Find nearest hit in ± 3 cm for X and Y directions
- Calculate length of track
- Correct time by proton peak correction coefficients
- Calculate mass and momentum of track
- Fill independent distributions for protons, π^- , π^+ and deuterons

There is module and momentum dependence

There is module and momentum dependence

F

DEUTRON

PI-

dy, cm

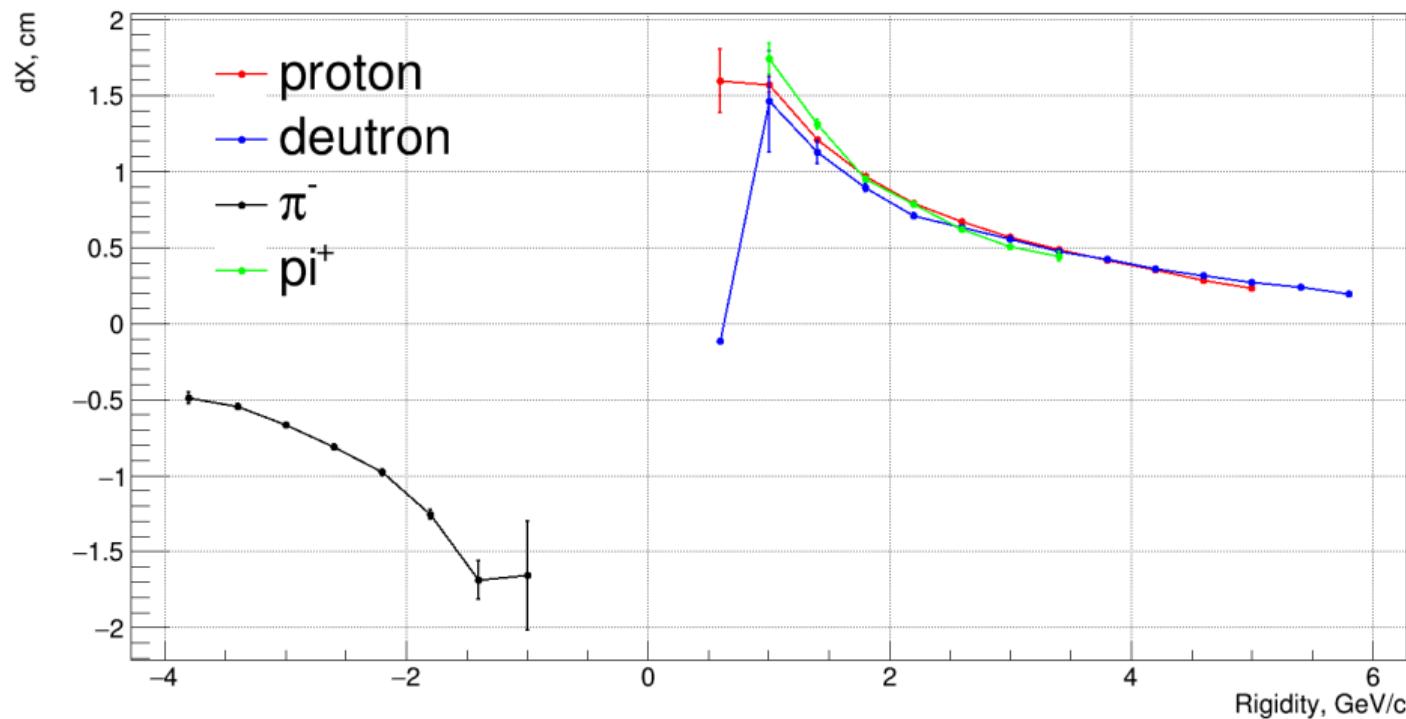

dX vs momentum for selected protons

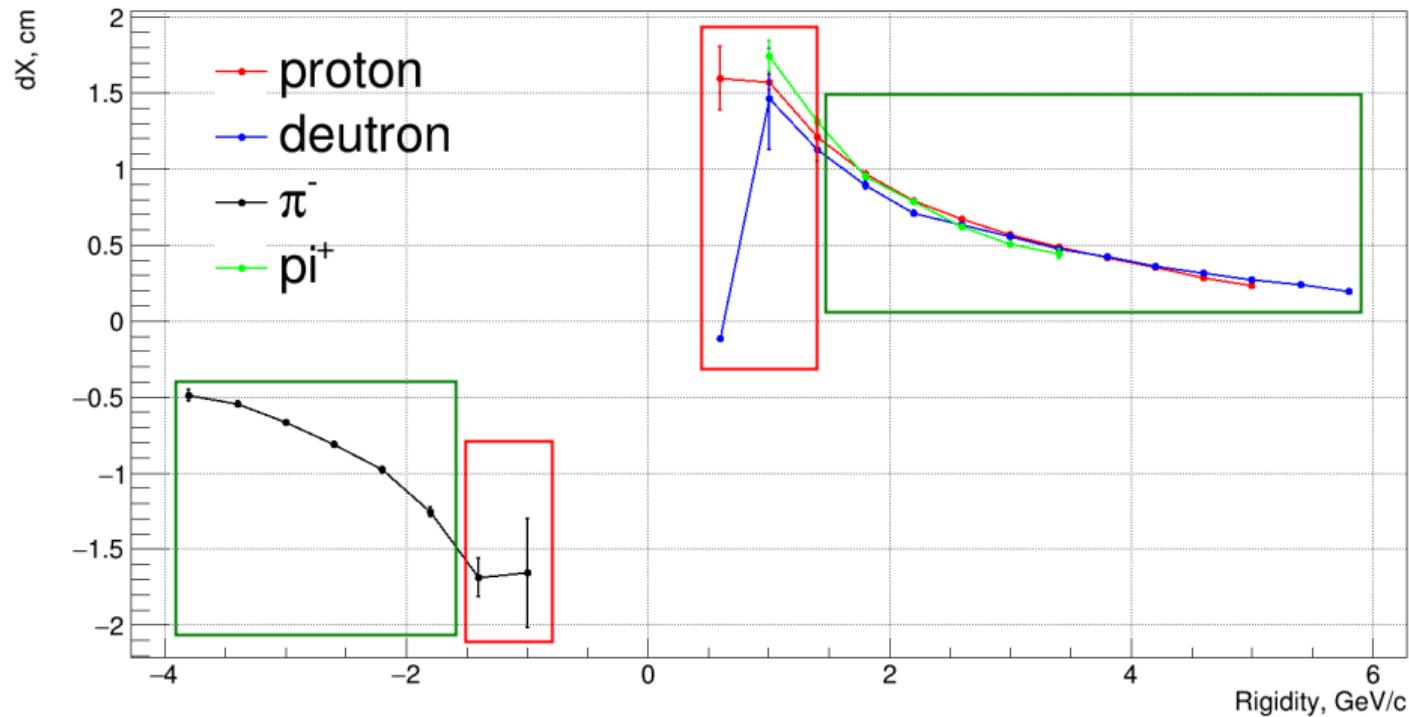

Plot was divided by slices of 0.4 GeV/c

Spectrum in slice fitted by “gaus+pol2” function and mean value used to get momentum dependence

dX vs Rigidity

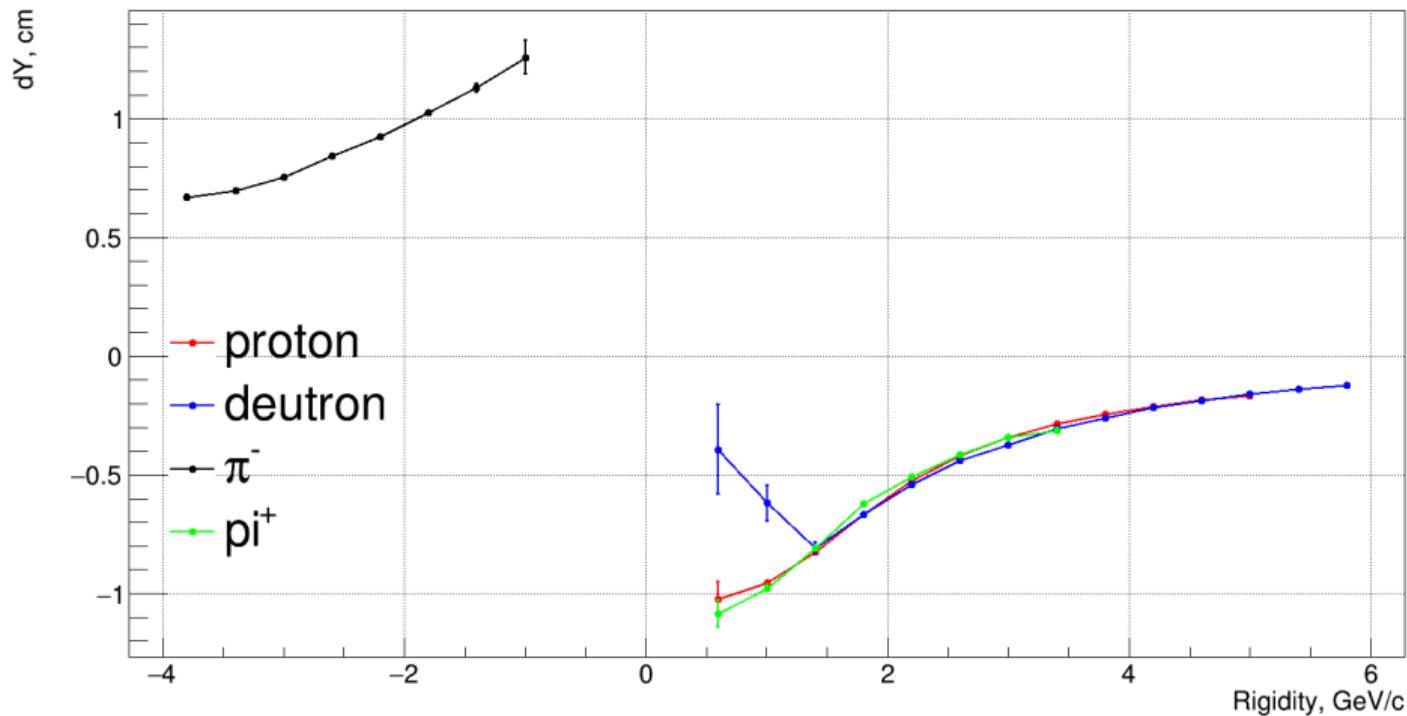

dX vs Rigidity

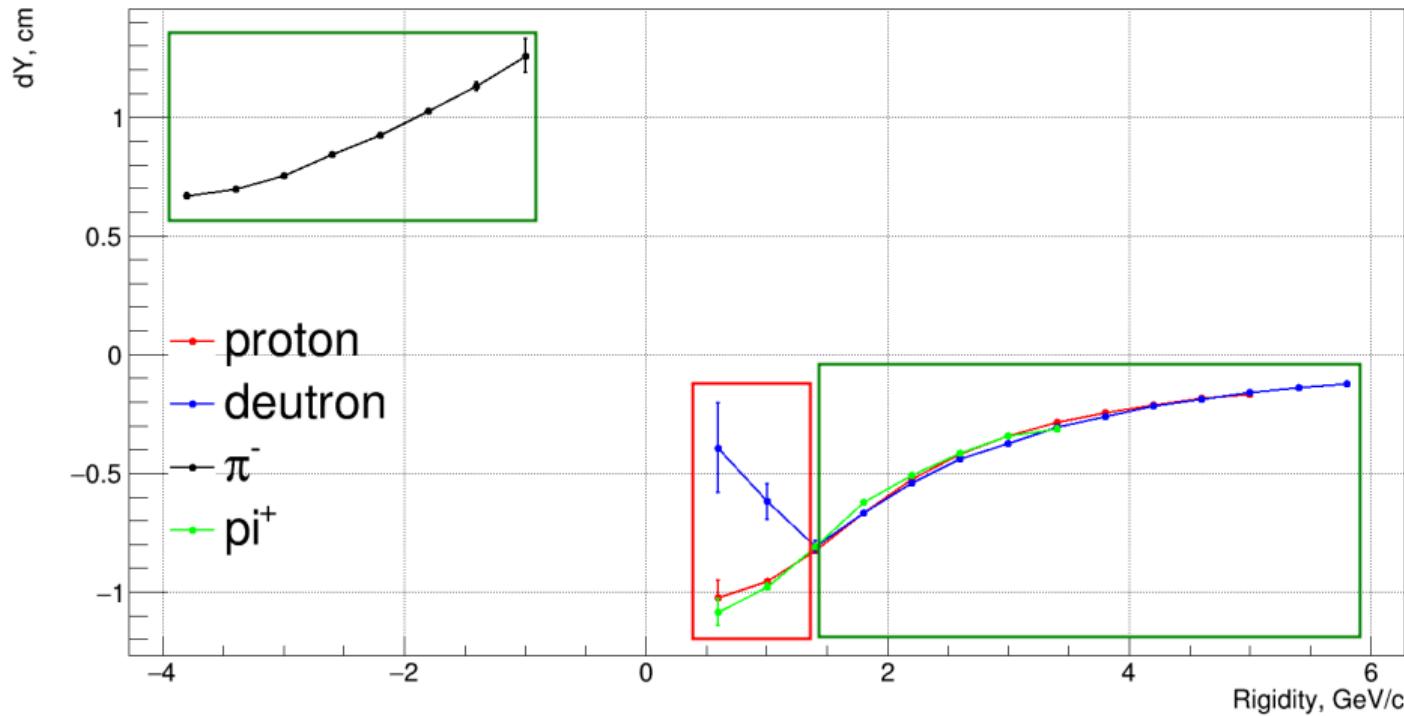

Lack of statistics for low momenta

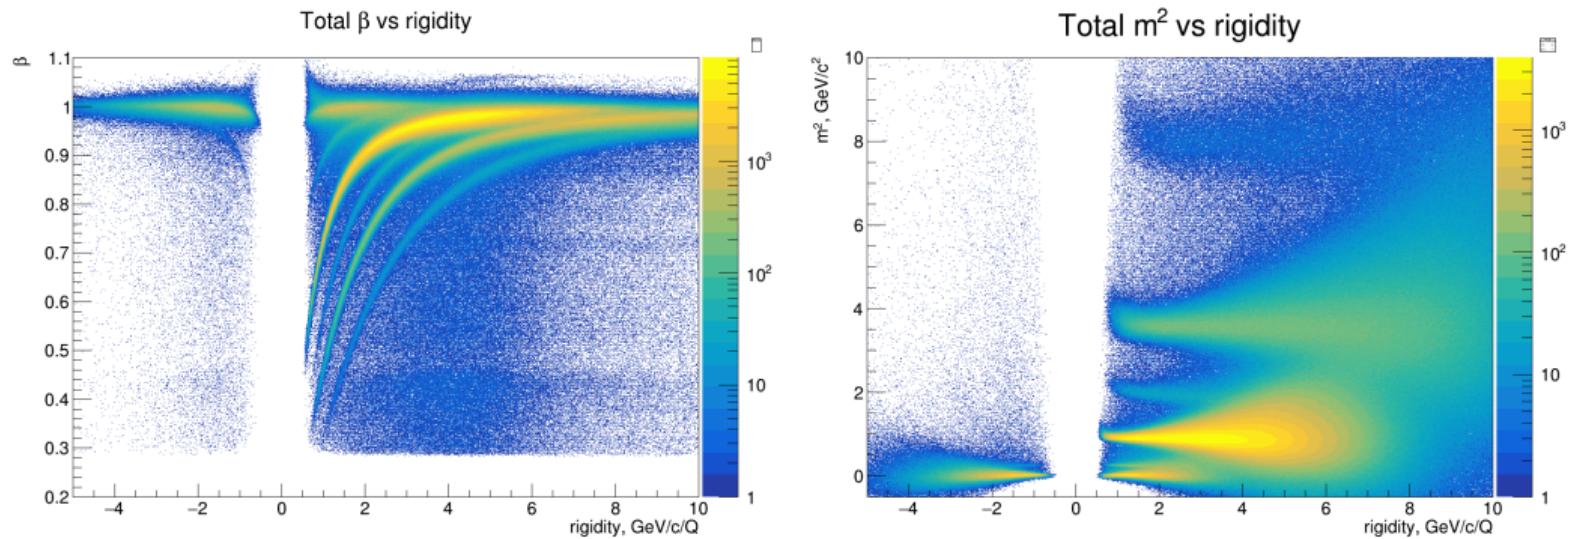

dY vs Rigidity

dY vs Rigidity

Lack of statistics for low momenta

Much better separation of fragments and presence of K^-

Next steps

- Fit momentum dependencies for dX and dY on higher statistics
- Get momentum independent shifts of modules
- Recalculate time shifts (because of track length changing)
- Implement time corrections in TOF-700 hit maker
- Implement momentum dependencies and coordinate alignment in global tracking (track to hit matching)
- Ask for new data production

Analysis teams can already start working with these corrections!
(Vasilisa and I can help)
