

# Straw-Barrel status report

# STRAW production line

- Productivity- 1m/min
- Length- 5.5m
- Diameter-from 10 mm
- Film thickness-36 microns
- Number of employees-10FTE
- Coating thickness 50-100nm
- Coating is carried out in the RF
- Produced ~20km straw
- Installed ~8000 straw
- After 10 years of operation non-working- 3 straw
- Film is available in Russia
- Number of employees-10FTE

# New Straw production line and assembling place

- Area ~200 sq.m., clean room~100 sq.m, machine shop and assembling hall~50 sq.m and 8,5 m high
- Double Production line length~12m
- The deadline is the beginning of the 3rd quarter of 2024
- Commissioning works-the beginning of the 4th quarter of 2024
- Necessary materials and equipment have been purchased
- Planned volume ~60km straw

# Measurements of the straw performance and choice of the readout electronics parameters

- **Spatial resolution (SPS)**

  - influence of the readout parameters

    - electronics noise, threshold

  - influence of the wire displacement

  - different operation conditions (gas gain, pressure dependence)

  - measurements in the magnetic field (H4)

- **Charge measurements (PS, low momentum pi, mu, e)**

  - charge distribution for different particle momenta

  - multiple scattering probability

  - electronics dynamic range for PID (protons are required, under discussion)

  - measurements at PNPI under discussion

# Beam Test activity

# Test beam periods 2024 at SPS and PS

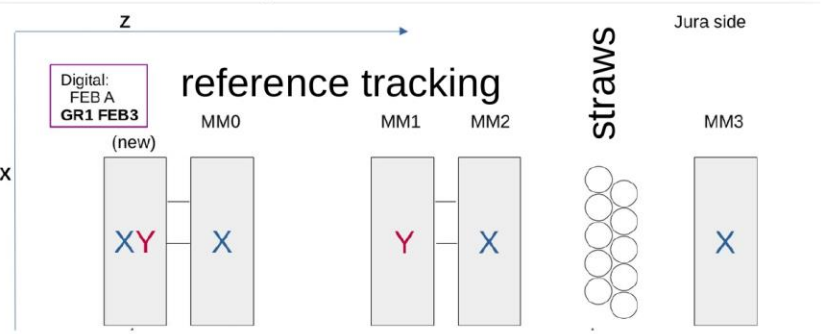

## Three different tasks:

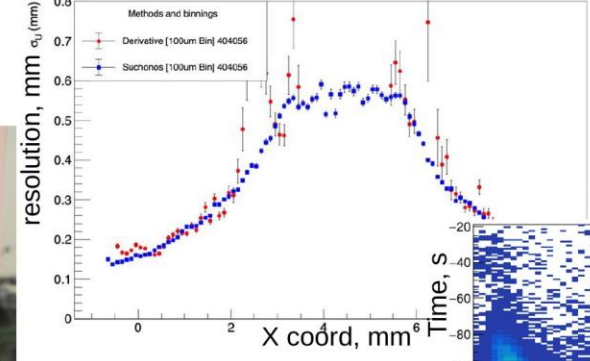

- setup development, readout electronics test and debugging :  
**SPS H8 beam dump** (low intensity muons)
- spatial resolution: **SPS H4**
- charge measurements for low momentum particles: **PS T09**

T9 PS		08/05-15/05			02/10-09/10
H4 SPS	10/04-24/04		26/06-10/07		18/09-02/10
H8 SPS dump			10/04-26/10		

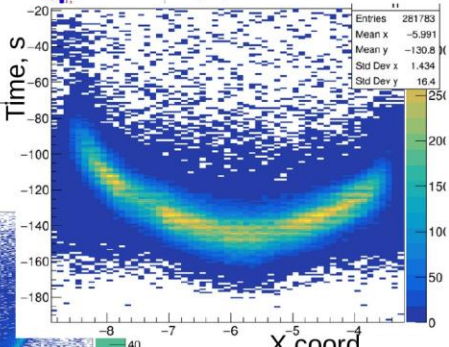

# The SPS setup

Coordinate resolution: **10mm**, VMM3

T(R), 5mm

T(R), 20mm

## Reference tracking:

- MM detectors (250 um, 400 um) + Tiger readout (Torino University)

## Under test: a combined straw tracker prototype + two types of readout: Tiger and VMM3

## Goals:

- evaluation of the realistic noise prediction and thresholds settings for the developing ASICs (Dune, DRD1-WP3)
- evaluation requirements for SHiP STT readout
- evaluation of TimeOverThreshold mode capability for straw readout with Tiger ASIC (to be continued at H8)
- evaluation of the charge measurement requirements for future PID options (to be continued at PS T9)

- ✓ Improved reference tracking resolution
- ✓ TIGER readout for high charge/high rate under study
- ✓ Upgraded TIGER FEB and cooling design
- ✓ Efficient data taking at H4, studies to be continued at H8
- ✓ Offline analysis started

Very grateful to DRD1/DRD2 for support and...  
<https://github.com/pspp/pspp>

# Validation with NA62 data

- good agreement between two independent analysis methods
- results similar to the resolution obtained with straw prototype and VMM3/TIGER

- see A.Chukanov's talk

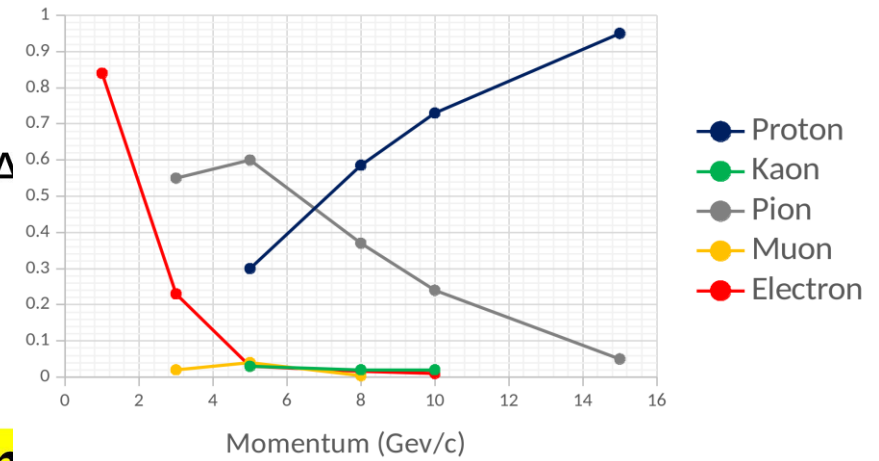

# The PS setup

## Straw PS setup 1

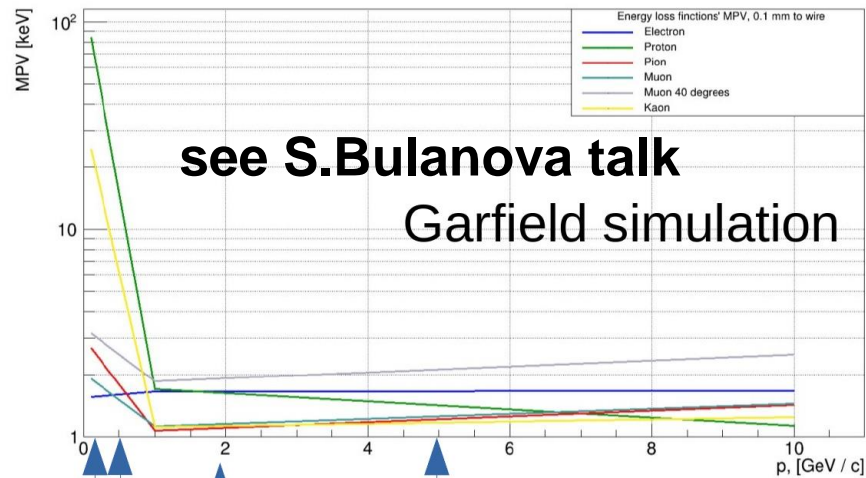

- Two straws read out with two custom PA
  - APIC (RD51) ~400 ns peaking time
  - JINR ~ 1 us peaking time
- Timepix detector
- scintillator

**Goal: to understand PS T09 beam conditions for October measurements**

MPV as function of particle momentum. 0.1 mm distance to wire

see S.Bulanova talk

Garfield simulation

- too low rate for 0.1 GeV/c (60 particles/spill),
- ok with 0.3 and 0.5 GeV/c – but seems not the best region for us
- 1-2 GeV seems promising for charge resolution measurements
- for lower momenta – offline analysis of the collected data started

@ T09:  
pi+mu+e  
( < 5 GeV )

hadron beam  
+ electron beam  
( reference )

Electrons are tagged with the Cherenkov detector  
15 mV threshold

# The PS setup

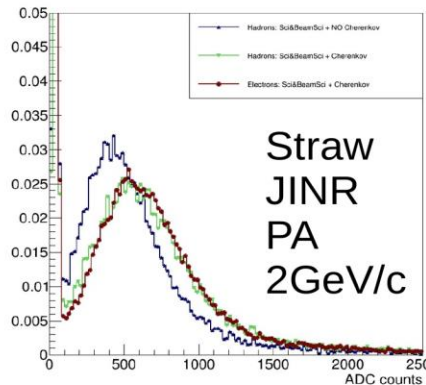

## Data setup 1

## Data setup 2 = setup1 + tracker prototype (last night)

- VMM3 readout of the prototype (SPS runs) – not optimal for charge measurements

- but 10 (10mm) or 20 (5mm) straws on the beam axis

Straw: careful analysis + comparison to simulation is needed

## Feedback from PS:

- will investigate possibility for **low momenta protons**
- for October TB it is possible to **increase intensity**

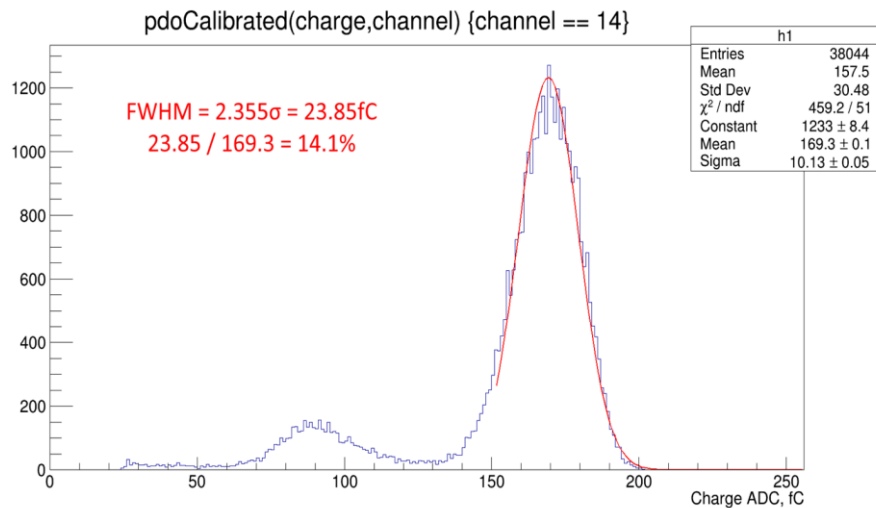

# Prototyping

- Small prototype production (lab and test beam straw and readout performance studies)
- development and prototyping of the construction elements (gas supply, sealing)
- development and optimization of the electrical

# Electronic R&D

VMM3a PCB with microcontroller.

# FEE на noname ASIC from De Geronimo

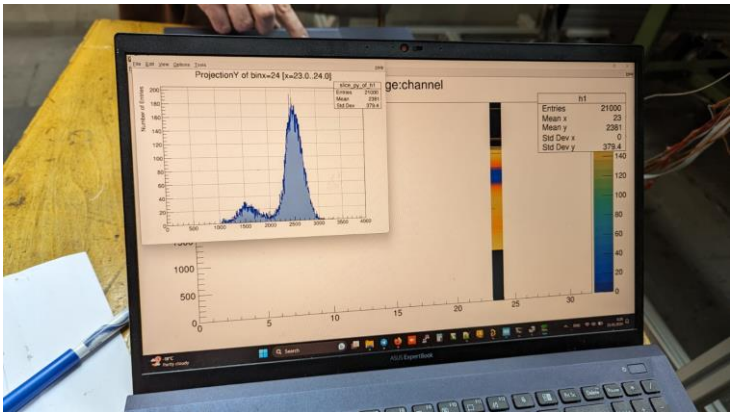

Table 1. ADC features on STM32G4 Series

Features	Values for STM32G4 Series
Number of ADCs	Up to 5
Resolution	12 bits (or 10, 8, 6 bits), 16 bits with oversampling
Number of input channels	Up to 42
ADC principle	Successive approximation register (SAR)
ADC clock frequency	Up to 60 MHz (up to 52 MHz in multiple-ADC operation case)
Sampling rate	Up to 4 Msps (up to 3.46 Msps in multiple-ADC operation case)
Sampling time	2.5 to 640.5 [ADC clock periods]
Supply voltage	$V_{DDA} = 1.62 \text{ V to } 3.6 \text{ V}$
Reference voltage	On dedicated VREF+ pin <sup>(1)</sup> (internal or external), $V_{REF+} = 1.62 \text{ V to } V_{DDA}$ (see datasheet)
Triggers	From external pins or internal peripherals (timers)
Conversion modes	Single, continuous, scan-selected channels, discontinuous mode
Others	Offset calibration, analog watchdog, hardware oversampling, offset compensation, gain compensation, interleaved mode (two ADCs coupled), sampling time controlled by trigger edges, bulb mode sampling

1. In the LQFP128-pin packages, two VREF+ pins are available.

# Contributions

- JINR – coordination, R&D, engineering and prototyping, straw production, lab and test beam data taking and analysis, readout development, gas system and aging (Karjavine's team)
- PNPI - test beam data taking and analysis, simulation (Garfield++ and SPDroot), reconstruction
- INP (Almaty) - straw production, testbeam data taking, Garfield++ simulation
- Polytech (SPb) – DAQ
- TPU (Tomsk) – FEE
- NCPHEP (Minsk) – FEE (Solin)
- Ongoing discussion with Indian institutes (IIT Guwahati, Panjab University, NISER Bhubaneswar)

# Gas System: design requirement

Gas systems (as detectors) are subject to severe requirements on material & gas for safe detector operation:

- Mainly (or exclusively) stainless steel pipe and components
- Need to validate most of the gas system components
- Documentation for QA and operation/maintenance follow up
- Monitoring of gas system operation
- Monitor of supply gases and mixture composition
- Evaluation of operational cost
- Flexible design to accommodate detector requirements/upgrades
- Careful evaluation of
  - resources for operation
  - resources for maintenance activity
  - Stability required
  - Balance requirements vs safety (as much as possible)

# Publications for 2023

## Testbeam Measurements and Realistic Simulation for the SPD Straw Drift Tubes

- November 2023
- [Physics of Atomic Nuclei](#) 86(5):832-837

## Straw signal modeling using Garfield++ interface to LTSPICE

- November 2023
- [Journal of Physics Conference Series](#) 2642(1):012005

## Online Gas Gain Monitoring System

- October 2023
- [Physics of Particles and Nuclei Letters](#) 20(5):1240-1242

- **VMM3 ASIC as a potential front end electronics solution for future Straw Trackers,**  
[NIM](#), Volume 1047, 2023,

# Plans

- straw tracker prototyping
- new assembling and production lab spaces
- recovery of the miniSPD setup
- readout electronics prototyping
- test beam measurements at SPS and PS, the corresponding data analysis and feedback to FEE developers
- evaluating possibilities for the testbeam measurements at PNPI (Gatchina), INP (Almaty) and AANL(ErPhI,Erevan)
- concept development of the gas supply system
- longevity study for straw and supporting element material

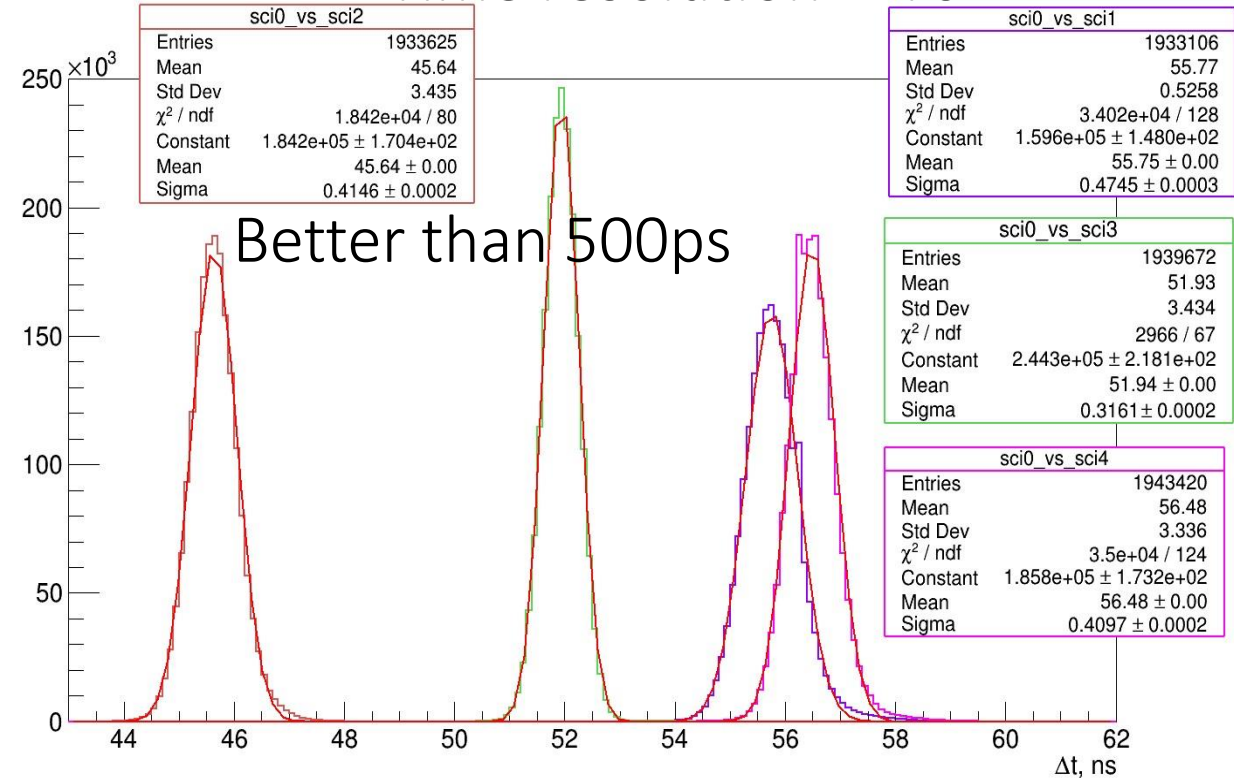

# Backup

# Reference tracking and timing

## Reference tracking -- residuals

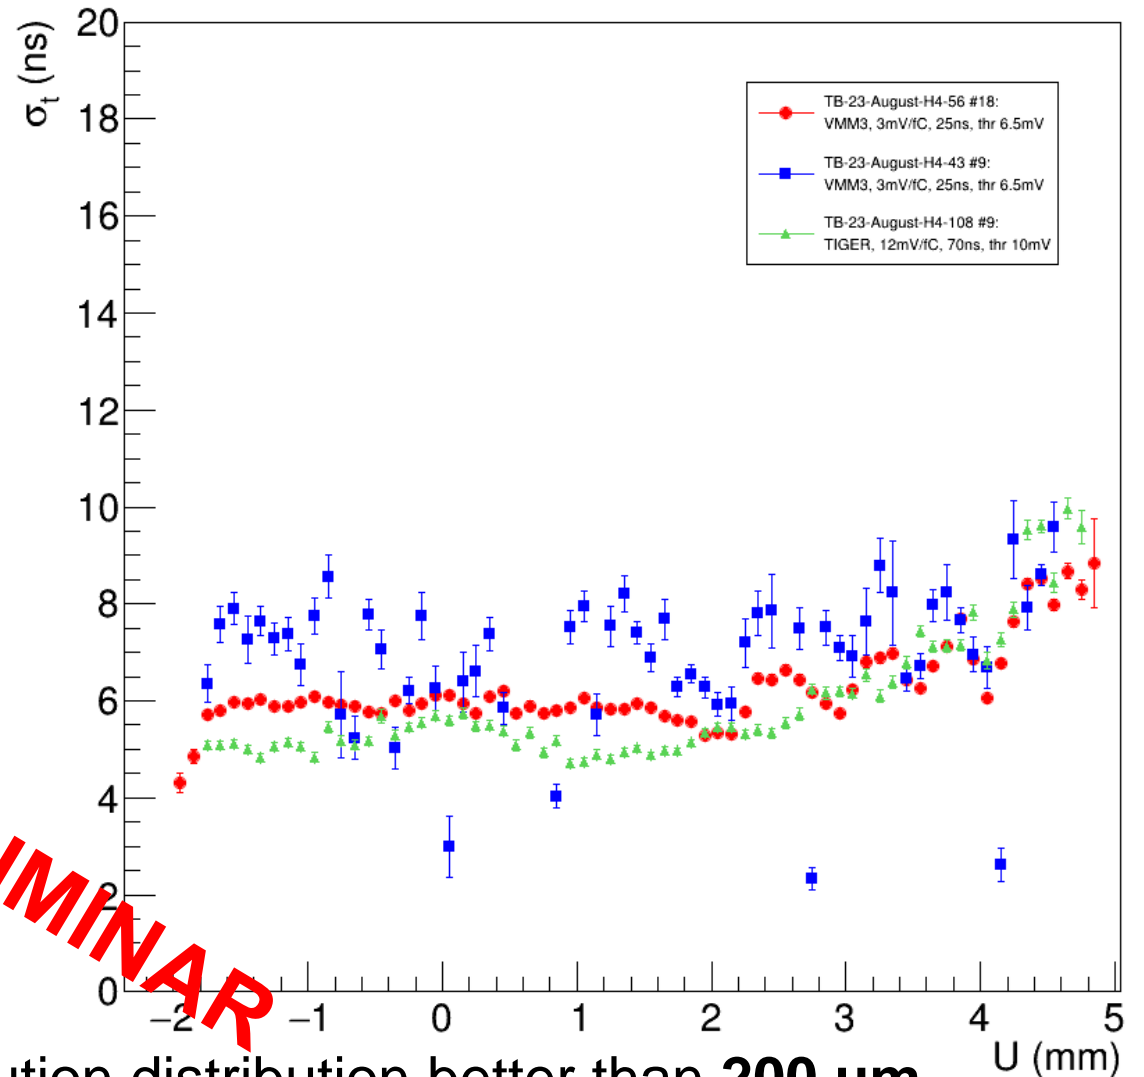

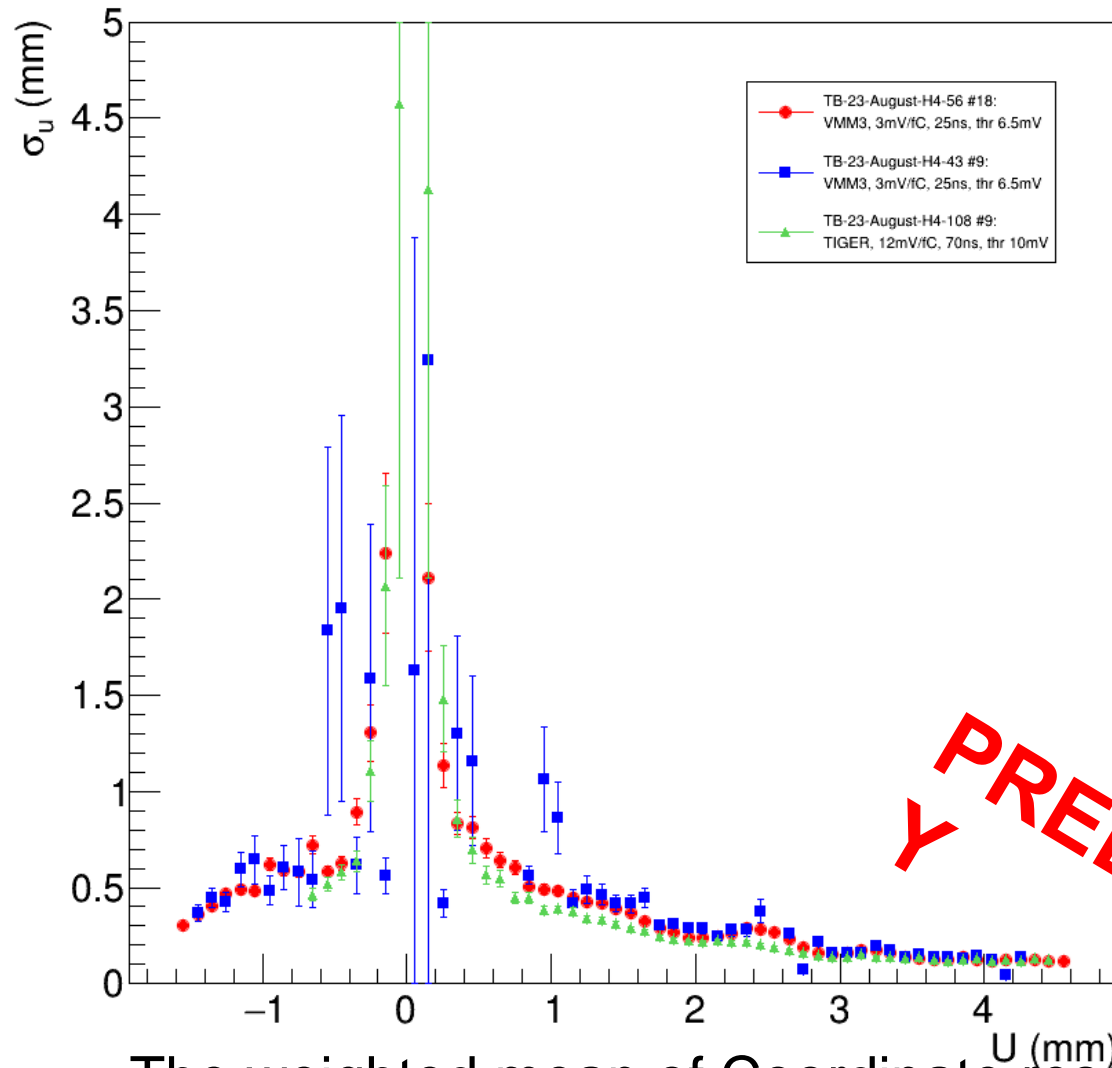

## Time resolution -- T0

Work ongoing:

- accounting for the reference system uncertainty in the TB analysis
- improvement of the reference tracking resolution

# 10mm Straw Resolution

PRELIMINARY

The weighted mean of Coordinate resolution distribution better than **200  $\mu\text{m}$**   
The best time 'resolution' is about **4-5 ns**

Analysis ongoing
