NRC "KI" participation in DataLake project

Tuesday, 11 September 2018 14:30 (15 minutes)

WLCG DataLake R&D project aims at exploring an evolution of distributed storage while bearing in mind
very high demands of HL-LHC era. Its primary objective is to optimize hardware usage and operational costs
of a storage system deployed across distributed centers connected by fat networks and operated as a single
service. Such storage would host a large fraction of the WLCG data and optimize the cost, eliminating
inefficiencies due to fragmentation.
In this talk we will explain NRC "KI" role in the DataLake project with highlight on our goals, achievements
and future plans.
