

INP BSU grid site

V. Mossolov

Dz. Yermak

V. Yermolchyk

Research Institute for Nuclear Problems of Belarusian State University
Minsk, Belarus

14 September 2018

Laboratory of Fundamental Interactions

- Participation in development of physical program and data analysis in modern and future particle accelerator experiments: CMS, ATLAS, CLIC and others.
- Calculation and analysis of observables in particle scattering processes including higher order effects.

ATLAS

INP BSU ATLAS group participates in a wide variety of physics studies¹:

- Activities within the hadronic Tile Calorimeter working group
- Jet Energy Measurements
- Jet Cross Sections Measurements
- Parton Distribution Functions (PDF) constraints
- Physics Beyond Standard Model (BSM)

¹<https://indico.cern.ch/event/598242/contributions/2428265/attachments/1396942/2130005/INPATLASOverviewPPT.pdf>

CMS

- Calculation of Radiative Corrections
- Monte-Carlo generator LPPG development
- Take part in Standard Model Physics group analyses: **Drell-Yan double differential contribution** and **Afb/Angular coefficients measurement**¹

¹<https://twiki.cern.ch/twiki/bin/viewauth/CMS/AfbAngularWG13TeV>

WLCG GRID site

GRID site had been created for the needs of INP ATLAS and CMS groups.

Main usage:

- Long term single job calculations.
- Testing grid jobs before main submission.
- Priority job execution.
- Storage area for analysis output data.

INP BSU GRID site

- Grid site **BY-NCPHEP**¹ is part of **NGI-BY**.
- It is **the only** production and certified site of the Worldwide LHC Computing Grid in Belarus.

 **Site: BY-NCPHEP**
 Research Institute for Nuclear Problems of Belarusian State University
 Resource center of the National Grid Infrastructure for Scientific Research in Belarus

accounting.egi.eu statistic

Countries — Total number of jobs by Country and Month (All VOs)

Country ^	Jun 2018	Jul 2018	Aug 2018	Total
Algeria	2,418	4,182	5,253	11,853
Armenia	5	0	201	206
Australia	273,073	374,578	247,122	894,773
Austria	46,829	19,482	7,515	73,826
Azerbaijan	10,945	14,789	14,780	40,514
Belarus	4,744	16,218	13,336	34,298
Belgium	80,028	67,645	59,852	207,525
Brazil	127,355	116,174	112,117	355,646
Canada	1,008,416	1,253,521	1,169,938	3,431,875
Chile	44,697	63,963	151,853	260,513
China	167,490	197,710	186,237	551,437
Czech Republic	471,541	478,935	536,625	1,487,101
Denmark	1,196	1,885	3,345	6,426
Estonia	52,773	41,601	47,185	141,559
Finland	71,424	49,807	67,870	189,101

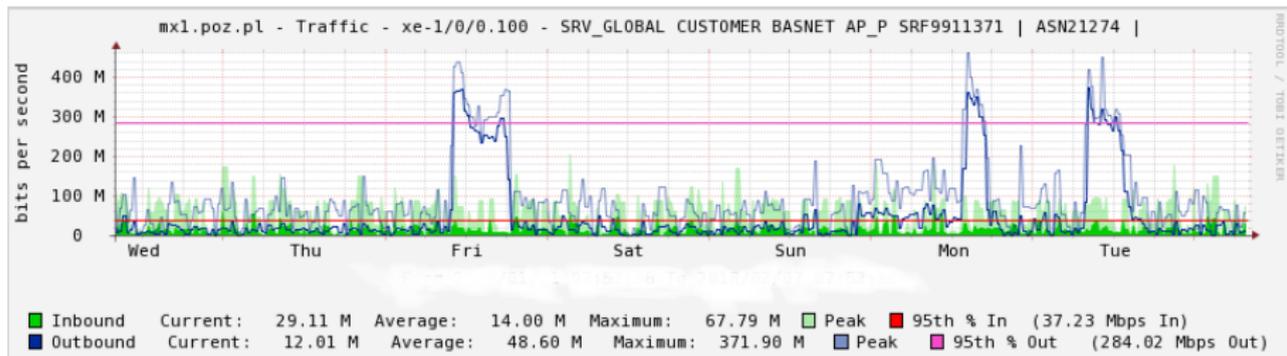

Previous limitations

- 50Mbit WAN

Network speed is too slow for work with CERN fts3 server. More than 50% of jobs failed with timeout error after waiting in queue.

Testing with GEANT network

Graphically	TaskName	NJobTotal	Pending	Running	Unknown	Cancelled	Success	Failed
	180206_073843:uyevarou_crab_crab_DataRun2016D-03Feb2017_ver2_v2	4860	0	0	0	0	4848	12
	180205_133220:uyevarou_crab_crab_DataRun2016C-03Feb2017_ver2_v2	2897	0	0	0	0	2897	0
	180202_093829:uyevarou_crab_crab_DataRun2016B-03Feb2017_ver2_v2	8715	0	0	0	0	8715	0

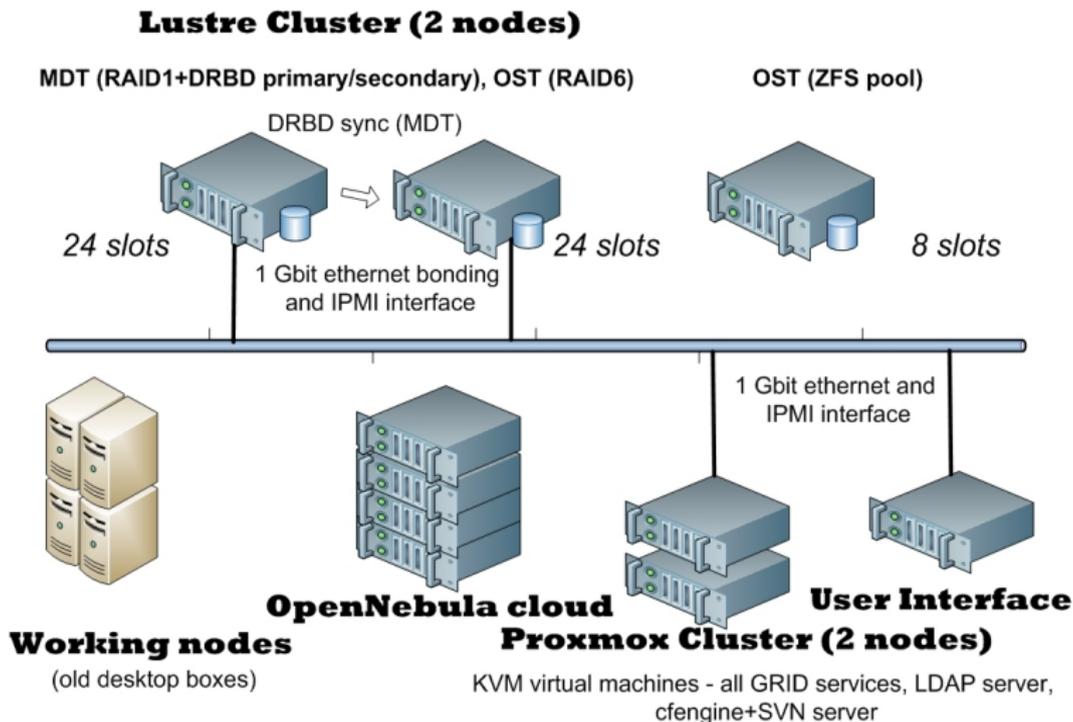

The part of successfully finished jobs has grown to 99.9% because no timeout error occurred!

Current state

- computational resources: 100 cores WN
- raid6 56TB storage, 55TB in use (+120TB in the next month)
- 1Gbit LAN
- 100Mbit WAN
- up to 1000Mbit WAN to GEANT network

Site scheme

Some Lustre on ZFS experience

Problem:

yum update was running for several hours in VM instance (kvm hypervisor in Opennebula cloud) if VM disk image is located on Lustre

More investigation:

opennebula_host# dd if=/dev/zero of=testfile bs=4K count=8000 oflag=sync
where testfile is placed on

Lustre (RAID6)	2.1 MB/s
local ZFS filesystem	460 kB/s
Lustre (ZFS)	26.9 kB/s

Symptoms of the problem disappeared:

when "unsafe" cache mode for VM drive enabled (= reduce sync operations)

Supposed problem source:

LU-4009 opened issue: "Add ZIL support to osd-zfs"

In order to improve sync performance on ZFS based OSDs Lustre must be updated to utilize a ZFS Intent log (ZIL)

Workaround:

for VM drive: use qcow2 base+derived pair of images instead of single image.†

Conclusions

- BY-NCPHEP is production and certified grid site of WLCG.
- It provide computational power for data analysis of LHC experiments.
- Also it can be used as testing site for new technologies.
- It is integrated to JINR cloud.
- Extension of storage system is in the first priority to provide area for analysis output data.
