Information-software environment for the GOVORUN supercomputer

Tuesday, 11 September 2018 14:00 (15 minutes)

In order to increase the efficiency of the application development and of the computations using the resources of the GOVORUN supercomputer, an IT-ecosystem that includes a set of services for users is being actively developed. The maintenance of the current services and the development of new ones is a key prerequisite since they secure to the users modern tools for efficient organization of their work under rapidly evolving technologies. This article describes new additions to the information-software environment of the GOVORUN supercomputer.
