Methods & tools of the RSC BasIS distributed micro agent platform for managing compute, network and storage resources to efficiently process data

Monday, 10 September 2018 16:00 (1 hour)

The poster covers methods and tools, developed within the RSC BasIS datacenter management platform: key benefits of a micro agent approach in solving the problem of the lack of connectivity between different layers in datacenter management and automation; architecture overview and use case examples.

We would like to share our operating experience of RSC BasIS Platform and discuss plans for its further development.
