Nonperturbative QCD! HIGH pt ISSUES at SPD and ...

NN – interactions mainly

- 1. Flavor universality (pp- and nn-interactions) and polarization unique possibility for SPD.
- 2. Diquark. Proof of the existence and to define the properties.
- 3. Exotic states $H(\Lambda\Lambda)$, tetra and pentaguarks,
- 4. Nature of the huge spin effects (spatially in exclusive reactions).
- 5. FSI (with s,c-quarks participation).
- 6. AN hypernuclei?

7. ...

NA- and AA – interactions

- 1. Nature of CsDBM and CT (deep inelastic fusion).
- 2. Subthreshold J/Ψ production (polarization).
- 3. The Deuteron spin structure at small distance.
- 4. np(nn) dilepton anomaly.
- 5. ...

Table I. Proton-proton elastic scattering cross sections at 90° in the center-of-mass system.

	211 611	center of in	ass system.	
				Error in
