Production and user analysis

- 4.1.6 data (~200M) are *being removed* by the S & C group
- 4.1.7-dev data (~20M) will remain, the fix and *re-reconstruction is necessary* due to problem with FARICH (see the talk by Amaresh)
- There were some zero-size reco files (eos or SpdRoot problem, causing crashes), the list of good ones has been prepared by Elena and uploaded to /eos/nica/spd/users/iden/production/spdroot-4.1.7-dev-minbias-27/reco_file_list.txt
- Ongoing work on Singularity image to generate data for the first stage using FTF
- Plan to start from 20M pp at $\sqrt{s} = 5$ GeV
- Proceed to dd - collision energies? - **please communicate!**
- Overall, only **commonly used samples** will be prepared (mostly - minimum bias). If you need specific samples for signal simulation, please do it yourself (or provide you request)

Thank you!
