

## The Govorun supercomputer for JINR tasks

*Tuesday 25 November 2025 14:10 (20 minutes)*

The heterogeneous computing platform HybriLIT is a multi-component system consisting of the “Govorun” supercomputer, a training and testing polygon, networked data storage systems, and a set of specialized services. The platform is designed for application development, high-performance computing, data processing, and data storage.

The presentation will provide an overview of the software and information environment of the HybriLIT Heterogeneous Computing Platform and the specialized services used to address JINR’s scientific and applied tasks.

**Presenter:** Mr ЗУЕВ, Максим (MLIT JINR)
