DAQ software in MPD experiment NICA

Tuesday 29 September 2015 17:10 (15 minutes)

Every experiment has its own software. Current report describes DAQ software of BM@N experiment:
• Run Control - program that controls (configure, prepare, start/stop) 'Run' execution.
• First Level Processor - layer that control data flow from Detector Readout Electronics(DRE), checking and formatting it.
• Event-Building systems - buffering data flow, sorting sub-events and distributing of completed events.
The report describes present state and plans for MPD NICA experiment.
