Configuration management at CERN

Friday 2 October 2015 17:00 (15 minutes)

The CERN IT Department provides configuration management services to LHC experiments and to the department itself for more than 17,000 physical and virtual machines in two data centres. The services are based on open-source technologies such as Puppet and Foreman. The presentation will give an overview of the current deployment, the issues observed during the last years, the solutions adopted, and the challenges for the future.

Author: Mr BARRIENTOS ARIAS, Ignacio (CERN)

Presenter: Mr BARRIENTOS ARIAS, Ignacio (CERN)

Session Classification: Workload Management Systems in Applied Research and BigData
