

Referee Report on status of the DC-280 cyclotron

The DC-280 cyclotron has accelerated the first internal beam in the end of December 2018.

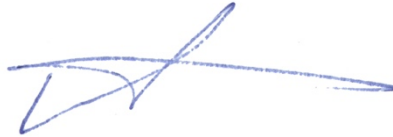

The PAC for NP congratulates the whole FLNR team with this achievement and wish the success in the full operation of the SHE Factory at the FLNR.

This important milestone in the construction of this new facility signed the beginning of important new period of commissioning with the beam of the cyclotron and of the experimental setups.

The full commissioning of the cyclotron is requiring the permit from the FMBA of Russia.

I am looking forward to hear more details on the current performances of different sub-systems of the cyclotron which should be compared to expected ones.
