

Stand to test preamplifiers of SiPM signals for electromagnetic calorimeter of the MU2E experiment.

Thursday, 18 April 2019 14:30 (15 minutes)

In this work a stand to test preamplifiers for electromagnetic calorimeter of the MU2E experiment (Tevatron, Fermilab) is presented. For this stand the control board has been developed, assembled and tested. Methods to test preamplifiers are proposed. A software for stand is being debugged.
