

Online monitoring system for the BM@N experiment

Ilnur Gabdrakhmanov, Sergei Merts

Joint Institute for Nuclear Research, Laboratory of High Energy Physics

2019

NICA Complex

General characteristics:

Beams - $p, d \dots {}^{197}\text{Au}^{79+}$

Collision energy:

$$\sqrt{s_{NN}} = 4 - 11 \text{ GeV} \quad E_{lab} = 1 - 6 \text{ AGeV}$$

Luminosity: $10^{27} \text{ cm}^{-2} \text{ s}^{-1}$ (Au), 10^{32} (p)

Experiments:

- 2 interaction points - MPD and SPD
- Fixed target experiment - BM@N

The general contractor is **STRABAG** (Bodostal-3 & PCJ are the sub-contractors)

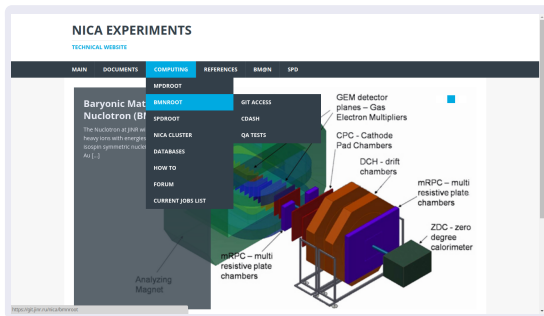

- **2017**: extracted beams of heavy ions are available within the BM@N experiment
- **2019**: a first configuration of the MPD setup available.
- **2023**: commissioning of the fully designed NICA-complex is foreseen.

The BM@N Experiment

BM@N Framework BMNROOT

NICA experiments home web-page:

<http://mpd.jinr.ru>

- News
- Software repositories
- Software tests
- Forums
- Database for physics run
- E.t.c.

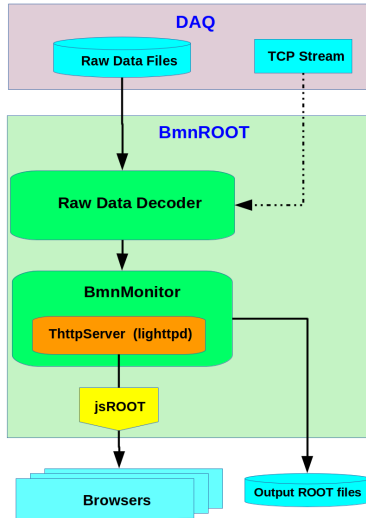

Benefits:

- Inherits basic properties from FairRoot (<https://fairroot.gsi.de/>), C++ classes
- Extended set of event generators for heavy-ion collisions
- Detector composition and geometry; particle propagation by GEANT3/4
- Advanced detector response functions, realistic tracking and PID included
- Event display for Monte-Carlo and experimental data

System overview

Current status

Work in progress

- Further parallelize data decoding
- Reference run based QA automation
- Embed full reconstruction chain including EventMonitor into online.

Thanks for your attention!
