Construction of visualization system for scientific experiments

Tuesday, 5 July 2016 14:00 (15 minutes)

Abstract: This proposal considers about possible approaches for the creation of visualization system designed for scientific experiments. Possible hardware solutions represented with various combinations of numerous components, such as computing nodes based on graphics cards, visualization and virtualization servers, and peripheral devices are studied in details. Description of software solutions having the ability to exploit that solution is also provided.
Keywords: Computing Infrastructure, Computer Graphics, Visualization

Primary authors: Prof. BOGDANOV, Alexander (St.Petersburg State University); Mr IVASHCHENKO, Andrei (St.Petersburg State University); Ms MILOVA, Evgeniya (St.Petersburg State University); Mr SMIRNOV, Konstantin (St.Petersburg State University)

Presenter: Ms MILOVA, Evgeniya (St.Petersburg State University)

Session Classification: 1. Technologies, architectures, models of distributed computing systems

Track Classification: 1. Technologies, architectures, models of distributed computing systems
