bwCloud: cross-site server virtualization

Friday, 8 July 2016 14:15 (15 minutes)

Computer Centers are using the Cloud Computing, providing their services based on different models. The purpose of bwCloud project is to build the prototype for cross-site Infrastructure as a Service (IaaS) system, based on the set of universities in Baden Württemberg (Germany). The system architecture, project status and the future work are the subjects of this work.
