## THREE-ATOMIC CLUSTERS OF RARE GASES WITHIN FADDEEV APPROACH

*Friday 10 June 2016 10:40 (10 minutes)*

The properties of the rare gas clusters of helium and neon are studied. The calculations of the bound state energies of helium and neon trimers are performed within Faddeev differential equation in total angular momentum representation.

**Presenter:** Mr KOROBITSIN, Artem (Bogoliubov Laboratory of Theoretical Physics, Joint Institute for Nuclear Research)
