GRID 2018

**International school
“Scientific computing, Big data analytics
and machine learning technology for
megascience projects”
in frame of GRID’2018 (grid2018.jinr.ru)**

The goal of the school is to attract young scientists, students and postgraduate students to solve IT-tasks and challenges related to various aspects of megaprojects in the field of high-energy physics and to familiarize participants with modern methods of Big data analytics, machine learning and high-performance computing systems and to use this knowledge to solve IT tasks in the field of high-energy physics.

The main topics of the School are:

- Big data by the example of the NICA megaproject and experiments at the Large Hadron Collider as the main source of big data in high-energy physics;
- Distributed systems for collecting, processing, managing and storing information;
- Use of high-performance systems (supercomputers, computing clusters) for data processing and modeling of physical experiments;
- Machine learning.
