

Mössbauer spectrometer with intelligent modulation of gamma ray energy

PALACKÝ
UNIVERSITY
OLOMOUC

Author: Mgr. Pavel Kohout

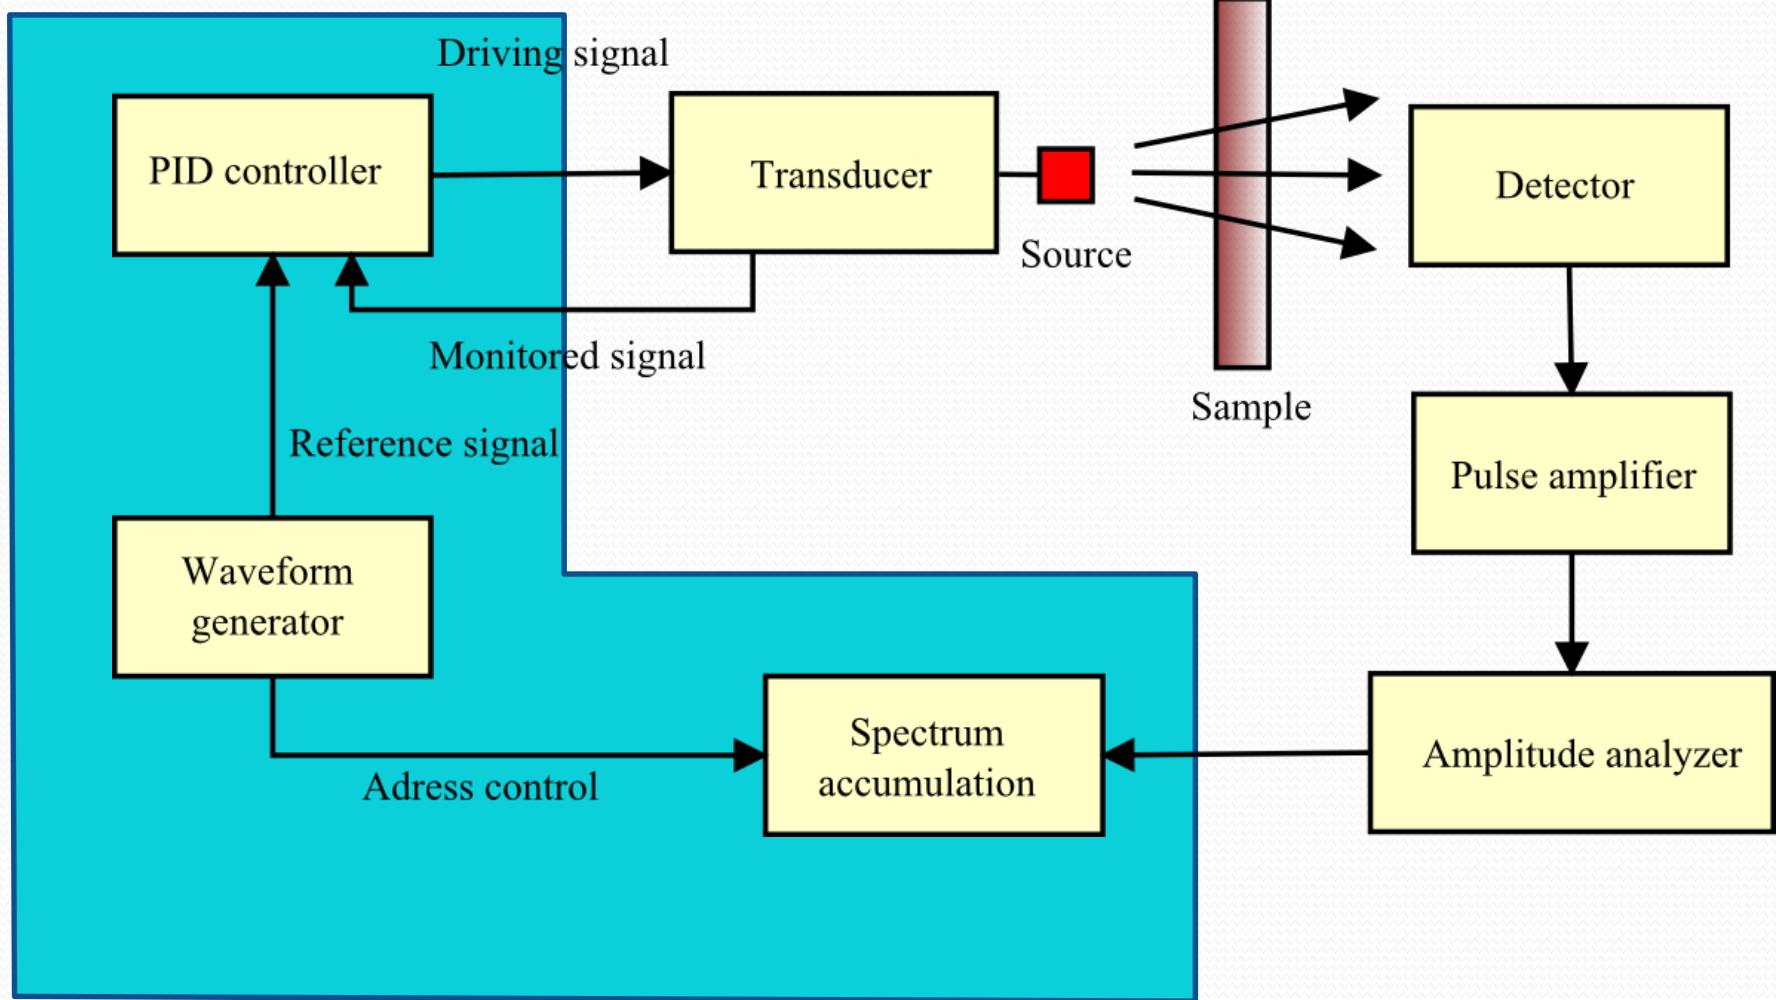

Supervisor: Doc. RNDr. Jiří Pechoušek, Ph.D.

Consultant: Prof. RNDr. Miroslav Mašláň CSc.

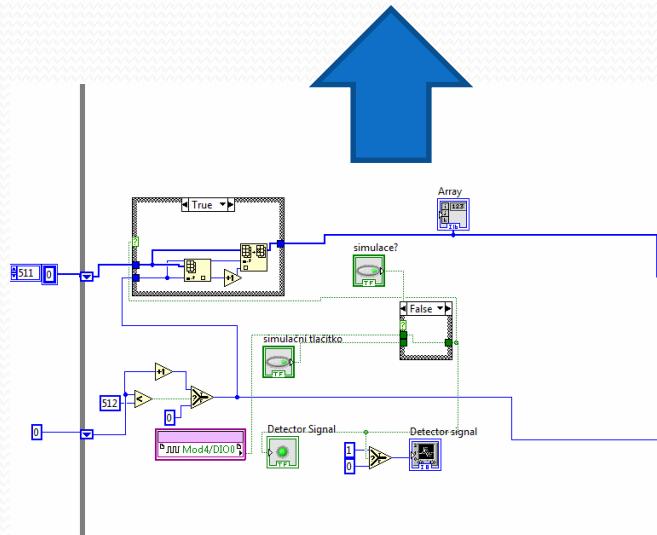

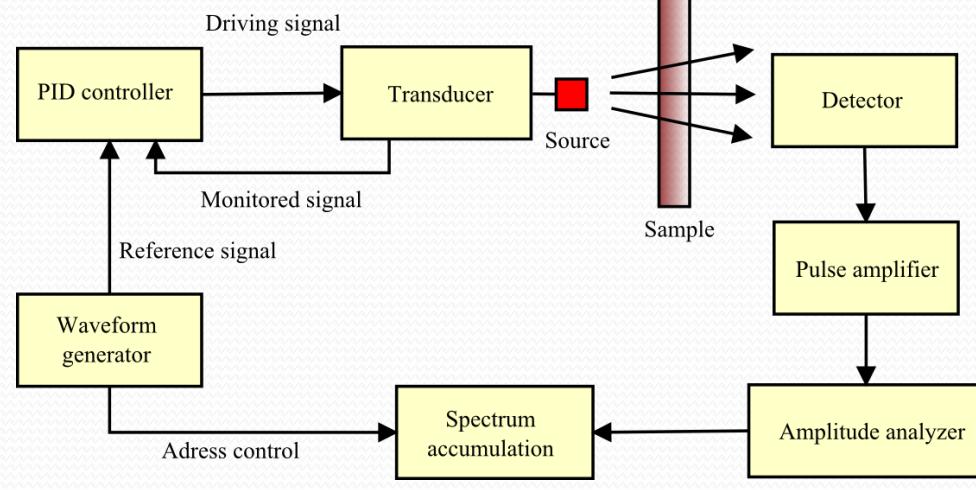

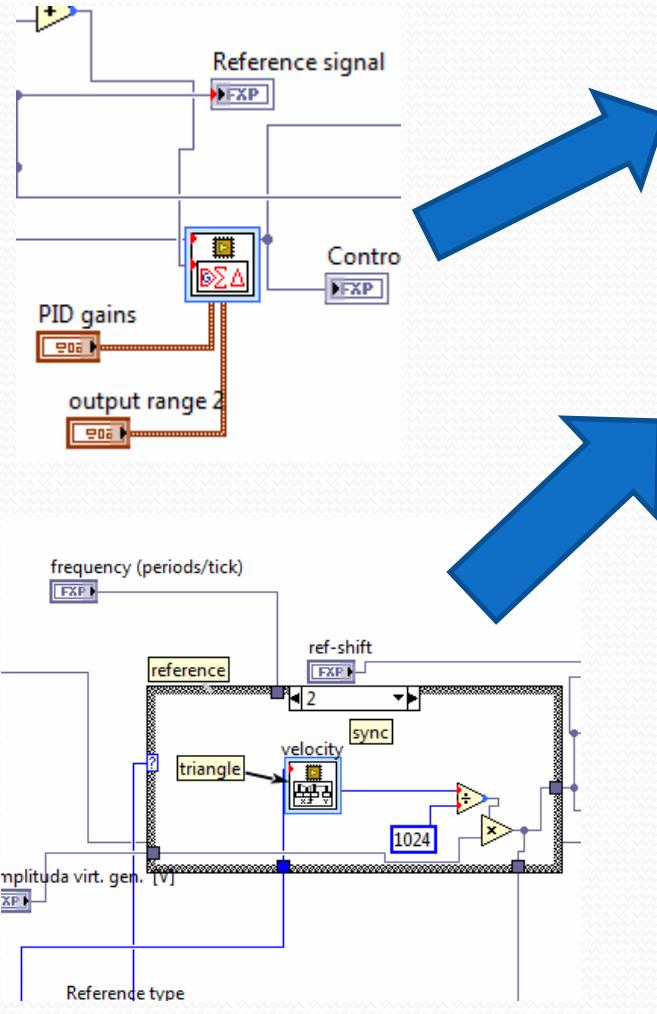

Outline

- Mössbauer spectrometer based on RIO platform
- Linearization of Mössbauer spectra
- Conclusion

Mössbauer spectrometer based on RIO platform

Mössbauer spectrometer based on RIO platform

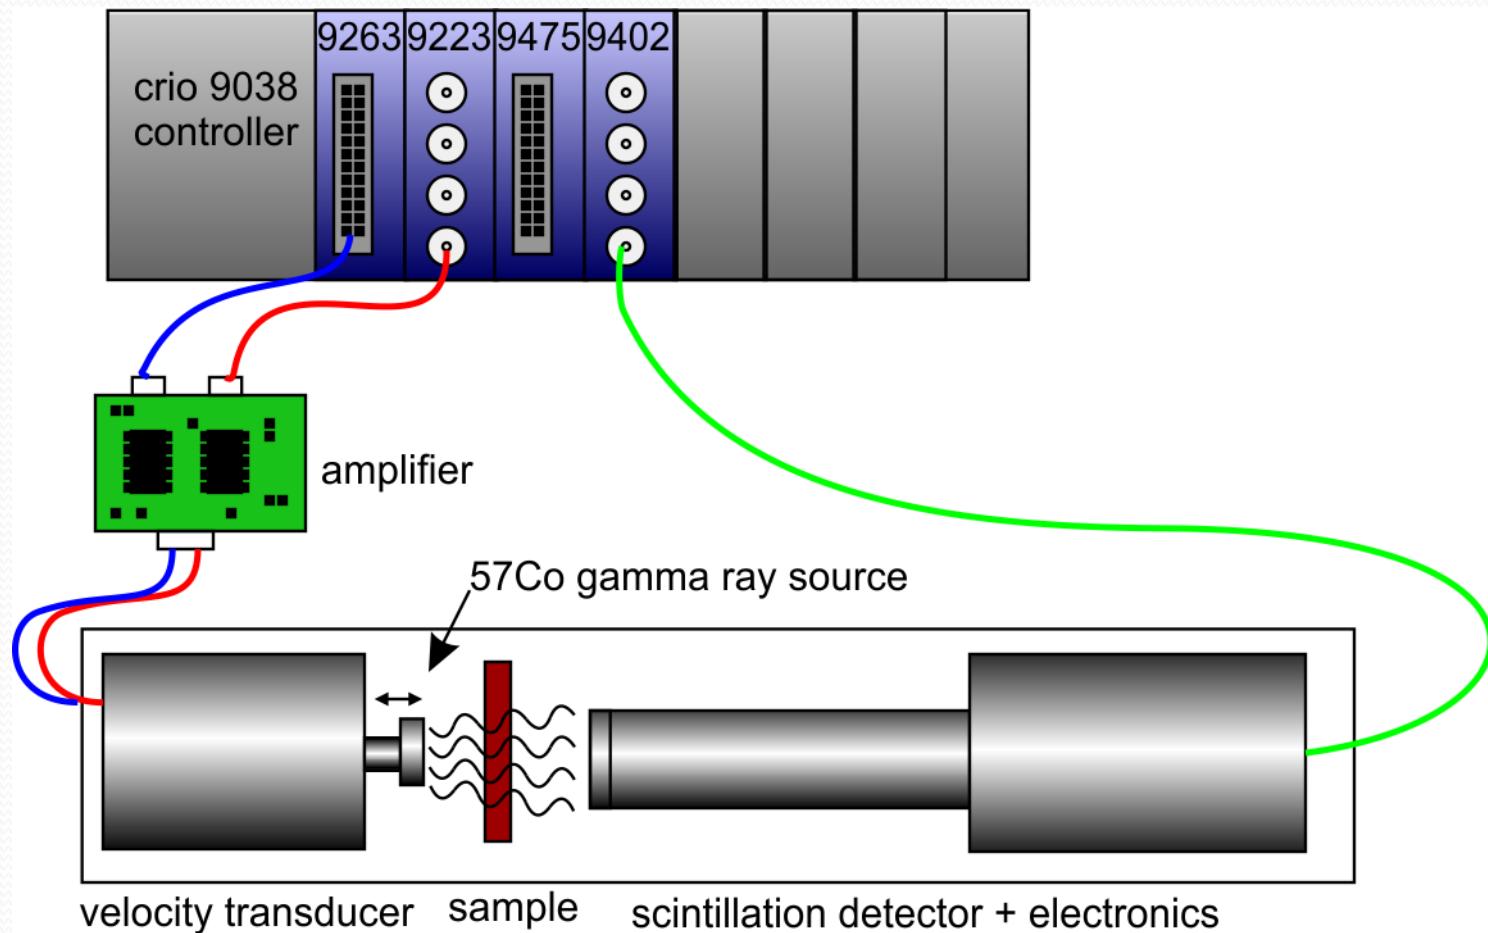

Mössbauer spectrometer based on RIO platform

- Velocity signal generation, PID regulation and spectra registration on single chip - FPGA (Field Programmable Gate Array)

NI cRIO 9038
NI 9263 (AO)
NI 9223 (AI)
NI 9475 (60V DO)
NI 9402 (fast DIO)

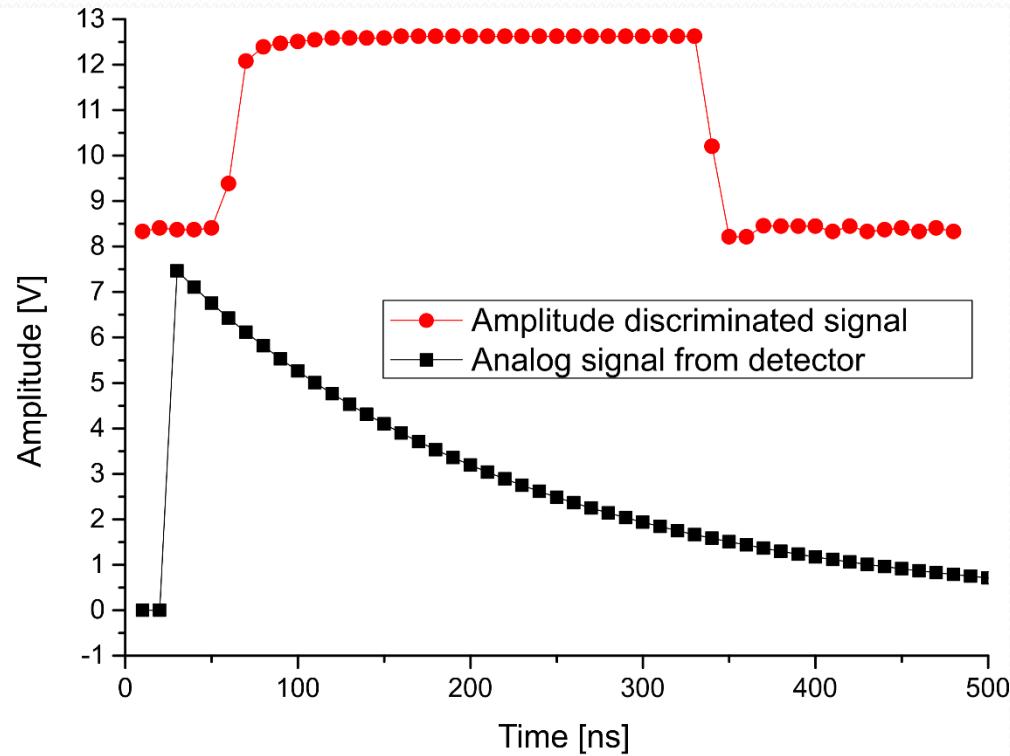

Mössbauer spectrometer based on RIO platform

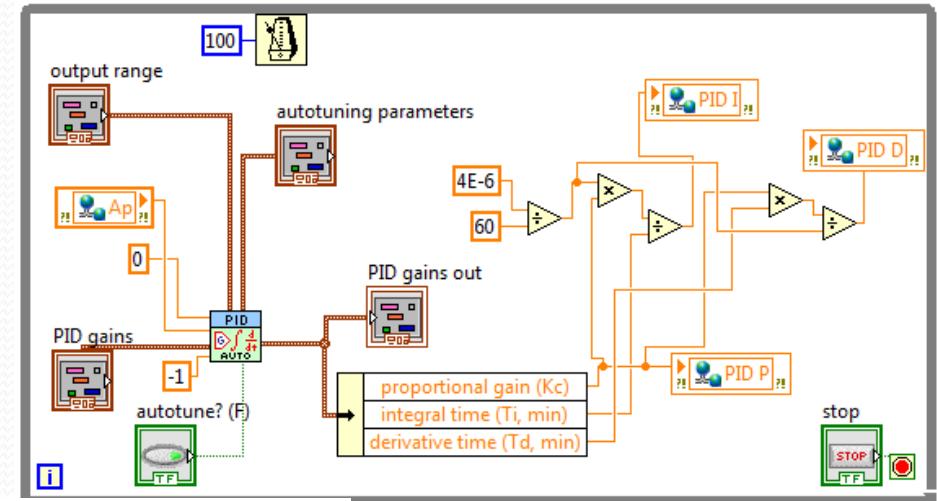

Detection

- Single channel analyzer
- Data acquisition using fast digital input

Velocity driving system

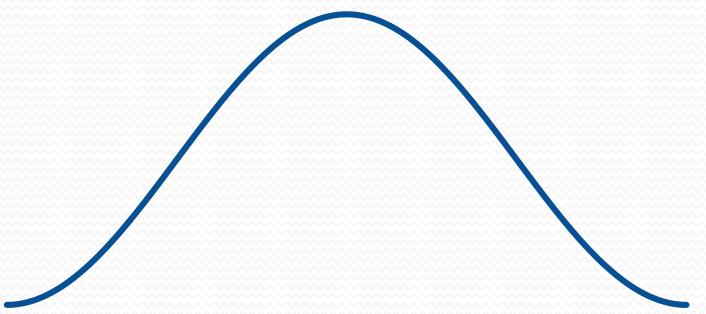

- Virtual velocity generator
- Double PID regulator (one for velocity, second for drift)
- Automatic PID parameters tuning using genetic algorithms

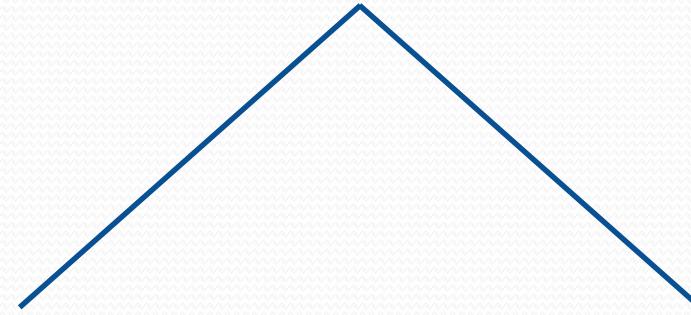

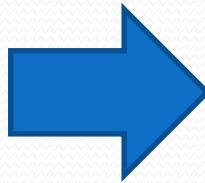

$$u(t) = k_R \left[e(t) + \frac{1}{T_I} \int_0^t e(\tau) d\tau + T_D \frac{de(t)}{dt} \right]$$

$$u(kT) = k_R \left\{ e(kT) + \frac{T}{T_I} \sum_{i=1}^k e(iT) + \frac{T_D}{T} \{e(kT) - e[(k-1)T]\} \right\} + u(0)$$

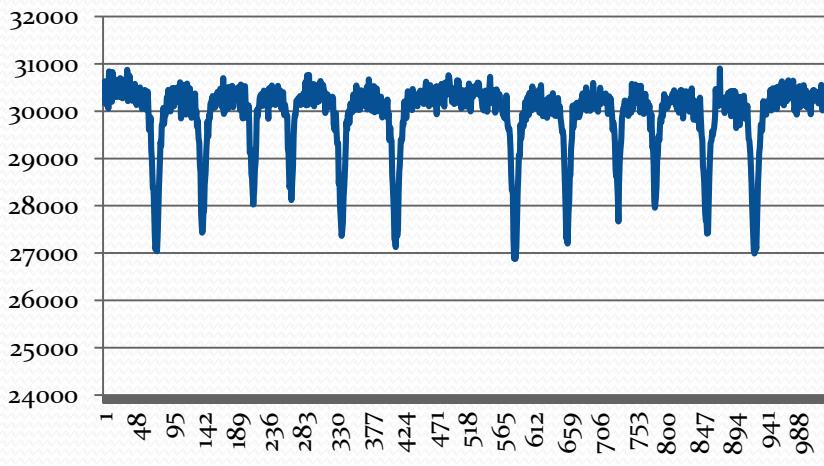

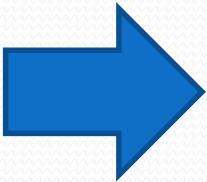

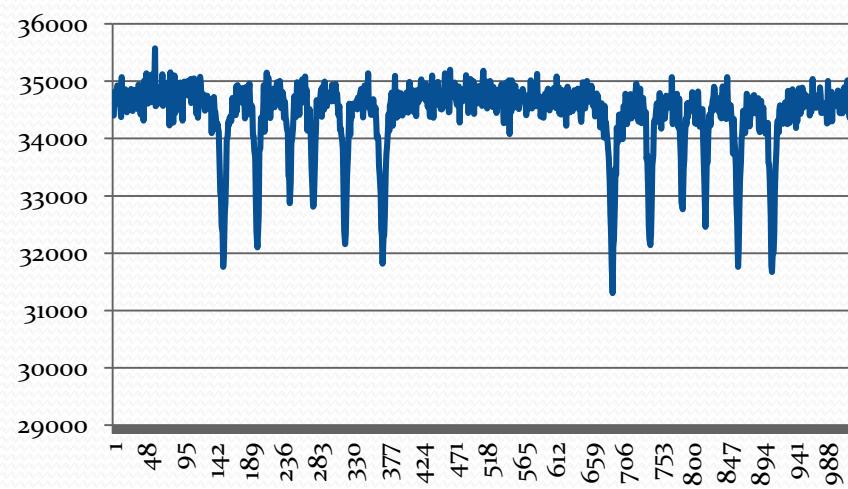

Sine velocity recalculation

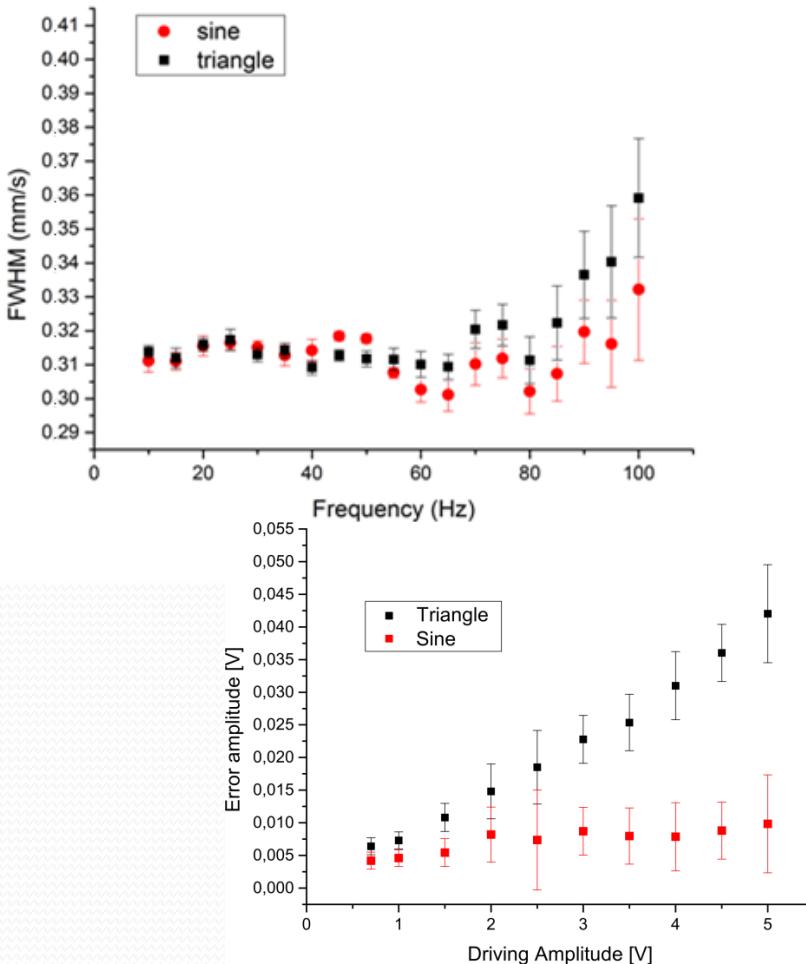

sine

recalculated triangle

Comparison with traditional MS using triangular velocity signal

Advantages of sine velocity signal

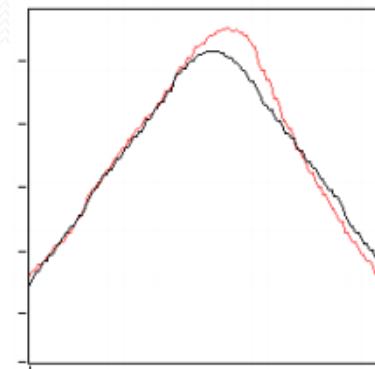

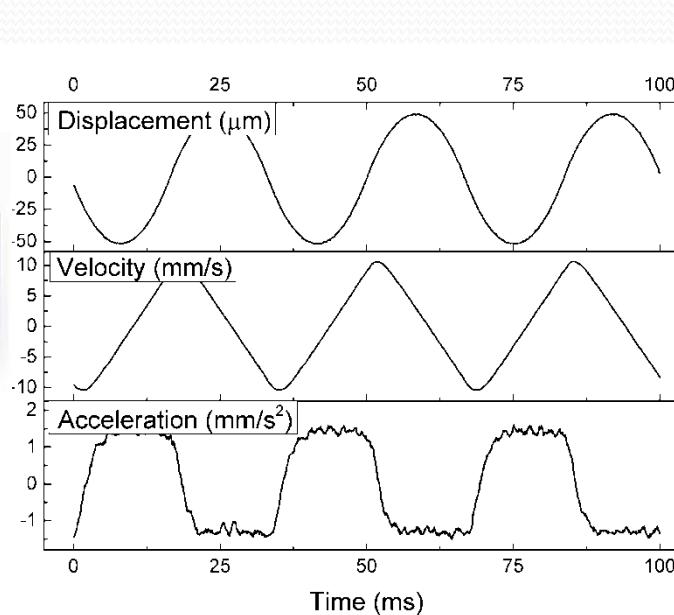

- Higher frequency stability
- Higher amplitude stability
- Useful for piezoelectric transducers

Laser system Keyence LKG-5000

- Linearity of velocity axis measured with laser vibrometer
- Useful for measuring the piezoelectric transducers
- Recalculation of spectra using inverse function of measured velocity

source: keyence.co.jp

Conclusion

- Mössbauer spectrometer based on RIO platform
- Programmed on FPGA
- DAQ using DI/O and amplitude discriminator
- Automatic tuning of PID parameters
- Spectra with sine velocity axis and their linearization
- Better frequency and amplitude stability
